Symbolic Regression Gabriel Kronberger, Bogdan Burlacu, Michael Kommenda, Stephan M. Winkler, Michael Affenzeller, 2024-08-16 Symbolic regression SR is one of the most powerful machine learning techniques that produces transparent models searching the space of mathematical expressions for a model that represents the relationship between the predictors and the dependent variable without the need of taking assumptions about the model structure Currently the most prevalent learning algorithms for SR are based on genetic programming GP an evolutionary algorithm inspired from the well known principles of natural selection This book is an in depth guide to GP for SR discussing its advanced techniques as well as examples of applications in science and engineering The basic idea of GP is to evolve a population of solution candidates in an iterative generational manner by repeated application of selection crossover mutation and replacement thus allowing the model structure coefficients and input variables to be searched simultaneously Given that explainability and interpretability are key elements for integrating humans into the loop of learning in AI increasing the capacity for data scientists to understand internal algorithmic processes and their resultant models has beneficial implications for the learning process as a whole This book represents a practical guide for industry professionals and students across a range of disciplines particularly data science engineering and applied mathematics Focused on state of the art SR methods and providing ready to use recipes this book is especially appealing to those working with empirical or semi analytical models in science and engineering

New Geometric Data Structures for Collision Detection and Haptics René Weller,2013-07-12 Starting with

novel algorithms for optimally updating bounding volume hierarchies of objects undergoing arbitrary deformations the author presents a new data structure that allows for the first time the computation of the penetration volume The penetration volume is related to the water displacement of the overlapping region and thus corresponds to a physically motivated and continuous force The practicability of the approaches used is shown by realizing new applications in the field of robotics and haptics including a user study that evaluates the influence of the degrees of freedom in complex haptic interactions New Geometric Data Structures for Collision Detection and Haptics closes by proposing an open source benchmarking suite that evaluates both the performance and the quality of the collision response in order to guarantee a fair comparison of different collision detection algorithms Required in the fields of computer graphics physically based simulations computer animations robotics and haptics collision detection is a fundamental problem that arises every time we interact with virtual objects Some of the open challenges associated with collision detection include the handling of deformable objects the stable computation of physically plausible contact information and the extremely high frequencies that are required for haptic rendering New Geometric Data Structures for Collision Detection and Haptics presents new solutions to all of these challenges and will prove to be a valuable resource for researchers and practitioners of collision detection in the haptics robotics and computer graphics and animation domains

Critical remarks on current practices of data article publishing: Issues, challenges, and recommendations Quan-Hoang Vuong, Viet-Phuong La, Minh-Hoang Nguyen, 2024-08-19 The contribution of the data paper publishing paradigm to the knowledge generation and validation processes is becoming substantial and pivotal In this paper through the information processing perspective of Mindsponge Theory we discuss how the data article publishing system serves as a filtering mechanism for quality control of the increasingly chaotic datasphere The overemphasis on machine actionality and technical standards presents some shortcomings and limitations of the data article publishing system such as the lack of consideration of humanistic values radical race for big data and inadequate use of expertise in data evaluation Without addressing the shortcomings and limitations the reusability of data will be hindered and scientific investment to facilitate data sharing will be wasted Thus we suggest that the current data paper publishing paradigm needs to be updated with a new philosophy of data
