

Intermolecular Forces

Context: Properties of molecules are determined by both the force of the chemical bonds that hold molecules together and the forces that occur between separate molecules.

The forces between molecules are called **intermolecular forces** and are largely caused by the how the electrons in molecules are oriented relative to other molecules.

Because we cannot easily measure the exact strength of intermolecular forces, we will typically use boiling point and vapor pressure as stand-ins for the amount of intermolecular forces in a molecule.
