Five Service Banks — Search preset frequencies in separate fire/police, air, ham radio, auto race, and marine banks, to make it easy to locate specific types of calls.

Two-Second Scan/Search Delay — Delays scanning for 2 seconds before moving to another channel, so you can hear more replies.

Ten Channel-Storage Banks — Store up to 20 channels in each of 10 different banks, to group channels so you can more easily identify calls.

20 Monitor Memories — Temporarily save up to 20 frequencies located during a search, so you can move selected frequencies to channel storage later.

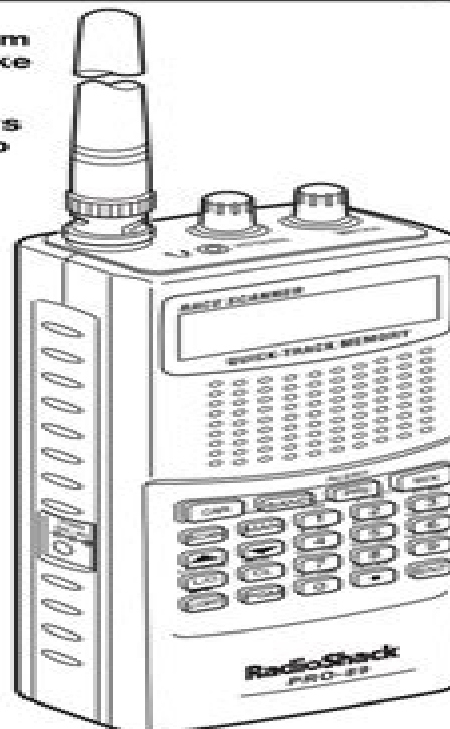

Memory Backup — Keeps the channel frequencies stored in memory for about 1 hour during a power loss.

Triple Conversion Superheterodyne Receiver — Eliminates interference from intermediate frequency (IF) images, so you hear only the frequency you select.

HyperSearch™ and HyperScan™ — Set the scanner to search at up to 50 steps per second and scan at up to 25 channels per second, to quickly find interesting transmissions.

Duplicate Frequency Check — Automatically notifies you if you are about to store a frequency you have already stored, to help avoid wasting storage space.

Direct Search — Search for new and unlisted frequencies starting from a specified frequency.
