

AQA GCSE Physics Paper 1

Energy is transferred between stores - Thermal, kinetic, gravitational potential, elastic potential, chemical, magnetic, electrostatic, nuclear

Energy is transferred... - Mechanically (by a force doing work), electrically (work done by moving charges), by heating or by radiation (like light or sound)

kinetic energy - energy of motion - the greater an object's mass and the faster it is going, the more energy there will be in its kinetic energy store. $E_k (j) = \frac{1}{2}m(kg)v(m/s)^2$

Raised objects store energy in gravitational potential energy stores - lifting an object in a gravitational field requires work, causing an energy transfer to the GPE store of the object. $E_p(j) = m(kg)g(N/kg)h(m)$

Falling objects transfer energy - Falling objects transfer energy from its GPE store to its kinetic energy store. When there's no air resistance, energy lost from the GPE store = energy gained in the kinetic energy store

Stretching transfers energy to elastic potential energy stores - As long as the limit of proportionality has not been exceeded, $E_e (j) = \frac{1}{2} k (N/m) e (m)^2$

specific heat capacity - the energy required to raise the temperature of one gram of a substance by one degree Celsius. $\Delta E (j) = m(kg) \cdot c(j/kg^{\circ}C) \cdot \Delta\theta (^{\circ}C)$
