

MARK SCHEME for the May/June 2014 series

0607 CAMBRIDGE INTERNATIONAL MATHEMATICS

0607/41

Paper 4 (Extended), maximum raw mark 120

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

The Pall Mall Budget, 1886 **Quantitative Assessment and Validation of Network Inference Methods in Bioinformatics** Benjamin Haiibe-Kains, Frank Emmert-Streib, 2015-04-14 Scientists today have access to an unprecedented arsenal of high tech tools that can be used to thoroughly characterize biological systems of interest High throughput omics technologies enable to generate enormous quantities of data at the DNA RNA epigenetic and proteomic levels One of the major challenges of the post genomic era is to extract functional information by integrating such heterogeneous high throughput genomic data This is not a trivial task as we are increasingly coming to understand that it is not individual genes but rather biological pathways and networks that drive an organism's response to environmental factors and the development of its particular phenotype In order to fully understand the way in which these networks interact or fail to do so in specific states disease for instance we must learn both the structure of the underlying networks and the rules that govern their behavior In recent years there has been an increasing interest in methods that aim to infer biological networks These methods enable the opportunity for better understanding the interactions between genomic features and the overall structure and behavior of the underlying networks So far such network models have been mainly used to identify and validate new interactions between genes of interest But ultimately one could use these networks to predict large scale effects of perturbations such as treatment by multiple targeted drugs However currently we are still at an early stage of comprehending methods and approaches providing a robust statistical framework to quantitatively assess the quality of network inference and its predictive potential The scope of this Research Topic in Bioinformatics and Computational Biology aims at addressing these issues by investigating the various complementary approaches to quantify the quality of network models These validation techniques could focus on assessing quality of specific interactions global and local structures and predictive ability of network models These methods could rely exclusively on in silico evaluation procedures or they could be coupled with novel experimental designs to generate the biological data necessary to properly validate inferred networks

The Failure of Economic Diplomacy P. Clavin, 1995-12-17 Based on new archival research this is the first comprehensive study of the failure of international co operation to combat the Great Depression The book explores the impact of protectionism reparations and war debts as well as the more well known disagreements on monetary issues which together helped to prolong the most profound economic depression of the twentieth century The economic and diplomatic lessons drawn from this period by the major powers particularly German intelligence as to the deep divisions in Anglo American economic relations also provide an important contribution to understanding the origins of the Second World War and the diplomatic and economic order created in its aftermath Biopolitical Governance Hannah Richter, 2018-05-17 For years critical theorists and Foucauldian biopolitical theorists have argued against the Aristotelian idea that life and politics inhabit two separate domains In the context of receding social security systems and increasing economic inequality within

contemporary liberal democracies life is necessarily political This collection brings together contributions from both established scholars and researchers working at the forefront of biopolitical theory gendered and sexualised governance and the politics of race and migration to better understand the central lines along which the body of the governed is produced controlled or excluded *Ocean Exchange and Circulation* Miroslav Gacic ,Manuel Bensì,2020-12-10 The reduction of greenhouse gas emissions particularly from fossil fuel powered vehicles and airplanes by means of weight savings and leaner fuel consumption helps to restrain environmental impacts In general for a variety of industries and specifically in the case of transport where both weight savings and increased energy efficiency are pursued the use of metal polymer multi material structures has been growing at an increasing and particularly fast pace in recent years Several manufacturing techniques have been or are being developed with the aim of being used for producing dissimilar materials in cost efficient manners This book presents recent developments in the state of the art of advanced additive manufacturing and the joining of metal polymer multi material structures in transportation This publication mainly focuses on the correlations between microstructure manufacturing process i e AddJoining adhesive bonding friction riveting friction based staking and friction spot joining properties and the mechanical performance of metal polymer multi material structures **Oswaal JEE**
