

The Safety Siren Pro Series³ Radon Detector is well designed to plug into a standard 120-volt household outlet using the provided and attached power cord. The detector should be placed facing up on a tabletop or any other flat surface where the ventilation slots won't be blocked. Remember to keep the detector dust free. A proper airflow must be maintained through the detector so as to obtain an air sample representing the local environment.

4. Areas to be Avoided

- Near drafts caused by heating, ventilating systems, and/or air conditioning vents, doors, fans and/or windows
- Near excessive heat areas, such as fireplaces, under direct sunlight, and areas of high humidity
- Near radios, computers, televisions, or other electrical equipments
- Near curtains, furniture, or any other items that may restrain the flow of air
- The detector should also not be placed in kitchens, laundry rooms, closets, or bathrooms

5. Display Features

The Safety Siren Pro Series 3 Radon Detector's display is designed to notify the user about the radon gas levels on either a short-term or long-term basis, and is updated every hour if there is a change in the levels. Both long-term and short-term measurements are run simultaneously and can be accessed by the use of the menu button. The numeric LED display of the detector shows the levels of radon gas in Pico Curies per liter i.e. pCi/L (the display range is between 0.0 and 999.9).

5.1. Short-Term Display

The display for the short-term reading is an average of radon gas levels over the past seven days. Short-term readings allow the user to monitor any fluctuations in the home environment providing seasonal and weather related variations also. A green LED next to the letter "S" indicates this short-term reading. If the measurement reaches 4pCi/L or more, with the exposure of 30 consecutive days or more, the audible alarm will ring.

5.2. Long-Term Display
