The Encyclopedia of the Industrial Revolution in World History
Kenneth E. Hendrickson III, 2014-11-25 As editor Kenneth E Hendrickson III notes in his introduction Since the end of the nineteenth century industrialization has become a global phenomenon After the relative completion of the advanced industrial economies of the West after 1945 patterns of rapid economic change invaded societies beyond western Europe North America the Commonwealth and Japan In The Encyclopedia of the Industrial Revolution in World History contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society The Encyclopedia of the Industrial Revolution in World History is a three volume work of over 1 000 entries on the rise and spread of the Industrial Revolution across the world Entries comprise accessible but scholarly explorations of topics from the aerospace industry to zaibatsu Contributor articles not only address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization Entries include generous selections of biographical figures and human communities with articles on entrepreneurs working men and women families and organizations They also cover legal developments disasters and the environmental impact of the Industrial Revolution Each entry also includes cross references and a brief list of suggested readings to alert readers to more detailed information The Encyclopedia of the Industrial Revolution in World History includes over 300 illustrations as well as artfully selected extended quotations from key primary sources from Thomas Malthus Essay on the Principal of Population to Arthur Young s look at Birmingham England in 1791 This work is the perfect reference work for anyone conducting research in the areas of technology business economics and history on a world historical scale

High Noon in the Automotive Industry Helmut Becker, 2006-02-10 This book was born from curiosity To begin with it was the curiosity of an economist who studied in the 60 s in an environment which has subsequently developed from national into global economics Who has to recognize that politicians scholars and large segments of society oblivious to supranational authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy And pretend as though their own national state were still the master in its own house that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which rooms All that has become fiction The laws of globalization diminish the manoeuvring space for shaping national economic policy Even if many folks today don t want to hear it The issue is no longer achieving what is socially politically desirable for the own society but

rather the optimal adaptation of society and social benefits to the politically practicable
