SPRINGING FORWARD AND FALLING BACK: WHAT IS DAYLIGHT-SAVING TIME?

HOW DOES DST WORK?

DST involves adjusting your clock forward by one hour in autumn and back by one hour in spring. This means that in autumn, you will lose an hour of sleep, while in spring, you will gain an hour of sleep. This is done to make the most of the daylight hours.

HISTORICAL ORIGIN

The concept of DST was first proposed by Benjamin Franklin in 1784. He suggested that people should wake up earlier in the morning and go to bed later at night to make the most of the daylight hours.

Daylight Saving Time (DST) has become something that many of us accept as a normal part of life, but its origins and intentions are often misunderstood. Commonly thought to be a half-hearted attempt to "save" an hour of evening sunlight, DST actually has little to do with modern agriculture. Its origins, ironically, date back to World War I, and its purpose is not to "save" time, but to make the most of the daylight hours. In the early 20th century, as nations sought to conserve resources and align their schedules with the rest of the world, DST was introduced. The idea was to "spring forward" one hour in the spring and "fall back" one hour in the autumn, effectively making the most of the daylight hours. This was done to conserve energy and resources, which were in short supply during the war. Today, DST is still practiced in many countries, but its purpose has changed. It is now primarily a way to conserve energy and resources, rather than a way to align schedules with the rest of the world.
