Gordin, G. John Ikenberry, 2020-01-14 A multifaceted portrait of the Hiroshima bombing and its many legacies On August 6 1945 in the waning days of World War II the United States dropped an atomic bomb on the Japanese city of Hiroshima The city's destruction stands as a powerful symbol of nuclear annihilation but it has also shaped how we think about war and peace the past and the present and science and ethics The Age of Hiroshima traces these complex legacies exploring how the meanings of Hiroshima have reverberated across the decades and around the world Michael D Gordin and G John Ikenberry bring together leading scholars from disciplines ranging from international relations and political theory to cultural history and science and technology studies who together provide new perspectives on Hiroshima as both a historical event and a cultural phenomenon As an event Hiroshima emerges in the flow of decisions and hard choices surrounding the bombing and its aftermath As a phenomenon it marked a revolution in science politics and the human imagination the end of one age and the dawn of another The Age of Hiroshima reveals how the bombing of Hiroshima gave rise to new conceptions of our world and its precarious interconnectedness and how we continue to live in its dangerous shadow today **The Chemical News and Journal of Physical Science**, 1883 *California. Court of Appeal (6th Appellate District). Records and Briefs* California (State)., Consolidated Case s H006486 H006143 California Earthquakes Carl-Henry Geschwind, 2003-04-30 Winner of the Book Prize of the Forum for the History of Science in America from the History of Science Society In 1906 after an earthquake wiped out much of San Francisco leading California officials and scientists described the disaster as a one time occurrence and assured the public that it had nothing to worry about California Earthquakes explains how over time this attitude changed and Californians came to accept earthquakes as a significant threat as well as to understand how science and technology could reduce this threat Carl Henry Geschwind tells the story of the small group of scientists and engineers who in tension with real estate speculators and other pro growth forces private and public developed the scientific and political infrastructure necessary to implement greater earthquake awareness Through their political connections these

reformers succeeded in building a state apparatus in which regulators could work together with scientists and engineers to reduce earthquake hazards Geschwind details the conflicts among scientists and engineers about how best to reduce these risks and he outlines the dramatic twentieth century advances in our understanding of earthquakes their causes and how we can try to prepare for them Tracing the history of seismology and the rise of the regulatory state and of environmental awareness California Earthquakes tells how earthquake hazard management came about why some groups assisted and others fought it and how scientists and engineers helped shape it Spying on the Nuclear Bear Michael S. Goodman,2007 Based on previously unavailable sources this book reveals the Anglo American intelligence effort to penetrate the most secret domain of the Soviet government its nuclear weapons program How We Teach Science John L. Rudolph,2019-06-01 Despite an enduring belief that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and determine how science is perceived by the public **Public Papers of the Presidents of the United States: Ronald Reagan, 1981** Reagan, Ronald,1982-01-01 Public Papers of the Presidents of the United States Rearming for the Cold War, 1945-1960 Elliott Vanveltner Converse,2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods **Philippine Public Schools** ,1929 Dental Science in a New Age Ruth Roy Harris,1989 Forum Memo to Members ,1976 Chemical News and Journal of Physical Science ,1909 Technical Association Papers Technical Association of the Pulp and Paper Industry,1929 **Critical Appraisal of Physical Science as a Human Enterprise** Mansoor Niaz,2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientist's theoretical framework or presuppositions Holton 1969a has deplored the widely accepted myth experimenticism according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations

Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hard core Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2
