Physical Sciences Paper Memo February 23:

Federal Register ,1983-12-27 **Creating the Cold War University** Rebecca S. Lowen,1997-07-01 The cold war university is the academic component of the military industrial academic complex and its archetype according to Rebecca Lowen is Stanford University Her book challenges the conventional wisdom that the post World War II multiversity was created by military patrons on the one hand and academic scientists on the other and points instead to the crucial role played by university administrators in making their universities dependent upon military foundation and industrial patronage Contesting the view that the federal grant university originated with the outpouring of federal support for science after the war Lowen shows how the Depression had put financial pressure on universities and pushed administrators to seek new modes of funding She also details the ways that Stanford administrators transformed their institution to attract patronage With the end of the cold war and the tightening of federal budgets universities again face pressures not unlike those of the 1930s Lowen s analysis of how the university became dependent on the State is essential reading for anyone concerned about the future of higher education in the post cold war era *The Chemical News and Journal of Physical Science* ,1894

NASA Technical Memorandum ,1975 **Chemical News and Journal of Physical Science** ,1894 Technical Abstract Bulletin ,1978 **Nuclear Science Abstracts** ,1965 *Cobalt Blues* Peter R. Almond,2012-11-02 For the last half of the 20th century cobalt 60 units were the mainstay of radiation treatments for cancer This book describes the development of the first cobalt 60 unit in the United States and the man behind it Leonard Grimmett Conceptually conceived before World War II it only became possible because of the development of nuclear reactors during the war The initial idea was to replace the radium in the contemporary units of the time with cobalt 60 but with the realization that the reactors could produce much more cobalt 60 than originally thought the design of the cobalt 60 unit was drastically changed to take advantage that the application of the inverse square law to cancer radiation treatments would make Although Grimmett conceived of and published his ideas first the Canadians built the first units because of the capability of their reactor to produce more suitable cobalt 60 sources The story tells how Grimmett and the other people involved came together at the time that the U S Atomic Energy Agency was pushing the use of radioactivity in medicine But Grimmett died suddenly before his unit could be built and very little information about him was known until recently when various documents have come to light allowing the full story to be told

How We Teach Science John L. Rudolph,2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of

light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual s intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

James B. Conant James G. Hershberg,1995 James B Conant 1893 1978 was one of the giants of the American establishment in the twentieth century President of Harvard University from 1933 to 1953 he was also a scientist who led the US government s effort to develop weapons of mass destruction and his story mirrors the transition of the United States from isolationism to global superpower at the dawn of the nuclear age This splendid portrait of Conant illuminates the life of a pivotal figure in the making of US nuclear scientific educational and foreign policy for almost half a century But the book is much more it is not only an insightful narration of Conant s life it is also a brilliant and important account of the making of the nuclear age a chronicle that contains much that is new TheWashington Post The bomb would be as much Conant s as it was anyone s in government His inner response to that burden of responsibility has long been obscured but it is illumined here This is a model of historiography that is evocative reading The New York Times Book Review Vibrantly written and compelling it breaches Conant s shield of public discretion in masterly fashion
