Smith, 2012-11-12 One of the most

active fields of educational research in recent years has been the investigation of problem solving performance Two opposing views of current research one suggesting that there are more differences than similarities within different domains and the other stating that there is great similarity lead to a variety of questions Is problem solving a single construct Are there aspects of problem solving performance that are similar across a variety of content domains What problem solving skills learned within one context can be expected to transfer to other domains The purpose of this book is to serve as the basis for the productive exchange of information that will help to answer these questions by drawing together preliminary theoretical understandings sparking debate and disagreement raising new questions and directions and perhaps developing new world views Research in Education ,1973 Teaching and Learning Mathematical Problem Solving Edward A.

Silver,2013-04-03 A provocative collection of papers containing comprehensive reviews of previous research teaching techniques and pointers for direction of future study Provides both a comprehensive assessment of the latest research on mathematical problem solving with special emphasis on its teaching and an attempt to increase communication across the active disciplines in this area **Resources in Education** ,1998 Student Edition Grades 9-12 2018 Cutnell,2019-03-11

the nature of a problem and the history of creativity and its conceptualisation the book then critically examines current educational practices such as creativity and problem solving models and common classroom teaching strategies This is followed by a detailed analysis of key pedagogical ideas important for creative problem solving creativity and cognition creative problem solving environments and self regulated learning Finally the ideas debated and developed are drawn together to form a solid foundation for teaching for creative problem solving and presented in a model called Middle C Middle C is an evidence based model of pedagogy for creative problem solving It comprises 14 elements each of which is necessary for quality teaching that will provide students with the knowledge skills structures and support to express their creative potential As well as emphasis on the importance of self regulated learning a new interpretation of P lya s heuristic is presented
