2. Explain your solution and why it will work.

5 Easy Steps to Choose the Best Problem to Solve

The biggest difficulty my students have in problem solution essays is choosing the right topic. Often, the first problem they think of is either too small of a problem for a whole essay or too big of a problem for them to solve in a short paper. Following the five steps below will guide you to choose a topic problem that:

- Is something that is important to you.
- Is a problem you know a lot about.
- Is a problem you can create a reasonable solution for.

1: Brainstorm groups you belong to

The easiest problems to write about are ones you have experienced. If there is something that bugs you, or if you've ever thought, "I have a better idea of how to do that!" you have a good start. To find your topic, start by making a list of different groups or organizations you belong to. Think about:

1. Where you live.
2. Hometown.
3. Activities, clubs, and hobbies you participate in.
4. School groups.
5. Sports groups.
6. Places you've worked.
7. Groups of people you may identify with, such as male/female, oldest/youngest child in a family, ethnic background, tall/short etc.
8. Stereotypes: consider what group others might place you into and the stereotypes of that group.

2. Think About Problems

Now take your list of groups and brainstorm different problems you see in these groups. The problems might be caused by:

1. The organization of the group
2. The leadership

Mathematical Problem Solving and New Information Technologies Joao P. Ponte, Joao F. Matos, Jose M. Matos, Domingos Fernandes, 2013-06-29 A strong and fluent competency in mathematics is a necessary condition for scientific technological and economic progress. However, it is widely recognized that problem solving reasoning and thinking processes are critical areas in which students' performance lags far behind what should be expected and desired. Mathematics is indeed an important subject but is also important to be able to use it in extra mathematical contexts. Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues. This book includes the revised papers presented at the NATO ARW Information Technology and Mathematical Problem Solving Research held in April 1991 in Viana do Castelo, Portugal, which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities. In recent years, several committees, professional associations, and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula, all emphasizing the importance of problem solving. In order to be successful, these reforming intentions require a theory-driven research base. But mathematics problem solving may be considered a chaotic field in which progress has been quite slow.

Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28 Complex problem solving (CPS) and related topics such as dynamic decision making (DDM) and complex dynamic control (CDC) represent multifaceted psychological phenomena. In a broad sense, CPS encompasses learning, decision making, and acting in complex and dynamic situations. Moreover, solutions to problems that people face in such situations are often generated in teams or groups. This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions. This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task, e.g., minimal complex system tests, which is a view taken by the psychometric community. The proposed approach taken here is that because CPS is multifaceted, multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other. Thus, this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holistic approach to investigating and theorizing about these abilities. The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS, DDM, and CDC. This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another, what learning conditions result in transferable knowledge and skills, and how these features can be trained.
