**The Essence of Research Methodology** Jan Jonker, Bartjan Pennink, 2010-03-10 Methodology is the eld which is indisputably complex In the academic world it is often said to be important yet in everyday academic practice it is not always treated accordingly In teaching methodology is often a mandatory course Usually it consists of learning how to adopt several common approaches when doing research and how to conceive a research design often leading to a survey This usually leads to collecting data on a modest scale and when the opportunity arises analysing the data with the help of some statistics Ask the students of their opinion at the end of such a course and they tend to heave a deep sigh of relief and say I have got through it Then their real courses start again in which methodology often does not play a role at all We are of the

opinion that writing off methodology in this way is a real pity It ignores the valuable role that methodology should play in academic teaching as a whole Here methodology is presented as a form of thinking and acting that while obviously entailing research work can also include the design and change of organisations This broad approach has been purposefully chosen as it is almost obvious from research and graduation projects that the students do not really have a clue what methodology involves and therefore wasting their time by producing work that has a little quality
