concerns of important actors lie at the root of the difficulties of resolving the Eurozone crisis as well as the difficulties to substantially reform EMU The book provides new insights into the politics of the Eurozone crisis by emphasizing three perspectives that have received scant attention in existing research a comparative perspective on the Eurozone crisis by systematically comparing it to previous financial crises an analysis of the whole range of policy options including the ones not chosen and a unified framework that examines crisis politics not just in deficit debtor but also in surplus creditor countries

Stress Field Control of Eruption Dynamics Roberto Sulpizio, Antonio Costa, Geoffrey Wadge, 2017-10-10 Increasing evidence supports the claim that stress changes play a fundamental role in triggering volcanic eruptions Stress changes may vary in origin to include

earthquakes erosion and landslide processes deglaciation or tidal effects The local stress can also change as response of magma influx from deeper reservoirs and an increase of the magma gas pressure The stress transfer may be of great importance in reawakening a dormant system As an example significant statistical correlation of large earthquakes and eruptions in time and space was suggested in many works The interaction may be two fold where magma intrusions may change the stress at active faults and trigger earthquakes while tectonic earthquakes may affect the magmatic system and change the eruption activity The change in local tectonic stress has been claimed as trigger of large ignimbrite eruptions or for controlling the eruptive style of explosive eruptions Sometimes volcano systems that are nested or closely located may become active in chorus neighbouring volcanoes may interact in the sense that one volcano triggers its neighbouring volcano However although there is ample evidence of concurrence the processes of interacting volcanoes and near to far field tectonic stress are not well understood Some studies suggest that volcanic eruptions are triggered if compressive stress acts at the magma system and squeezes out magma Other studies suggest that extensional stress fields facilitate magma rise and thus encourage eruptions or that fluctuating compression and extension during the passing of seismic waves trigger eruptions This research topic tries to address some of the important open questions in interaction between stress field and volcanic eruption though both review papers and new contributions
