Pine, 2016-07-01 Food insecurity in the US is a critical issue that is experienced by approximately 15% of the population each year Hunger is not caused by an inability to produce enough food for the population but is instead a manifestation of federal agricultural policies that support the overproduction of commodity crops and neoliberal social policies that seek to lower the amount of benefits dispersed to those in need This book focuses on how four different food based community programs address both the physical sensation of hunger as well as the political and economic disempowerment that work against the ability of people experiencing food insecurity to mobilize as a political force *Confronting Hunger in the USA* argues that most food programs do more to create community among their volunteers than among program participants and tend to reinforce neoliberal understandings of citizenship Community food programs reach out to the most vulnerable members of society in caring and gentle ways and often use the language of alternative economies to articulate a different relationship between the individual and the state However the projects in this study act as individual pieces of the state s insufficient social safety net and are only beginning to articulate a new relationship between food and society **Beyond regulatory compliance - Seafood traceability benefits and success cases** Food and Agriculture Organization of the United Nations , 2020-06-01 Since the mid 1990s traceability has become a popular concept in industrial logistics regardless of the production regime and type of product Implementing traceability systems across the food supply chain is seen as crucial for increasing food quality and safety for optimizing production or for documenting sustainability However implementation of traceability systems in the seafood sector seems to be stagnating Against this backdrop the main objective of this study is to define and analyse in detail seafood traceability benefits related to regulatory compliance supply chain management improvements market access facilitation and risk mitigation To support this objective the study collects and compiles policy incentives from governments and industry associations to encourage the establishment of company seafood traceability In addition this study updates information regarding existing traceability standards and norms serving various purposes in the seafood sector Based on a thorough analysis of speciality literature and the extensive experience of the authors this study formulates several recommendations that are relevant for a wide range of stakeholders in the seafood sector Parliamentary Debates

Biorefineries Aleš Prokop, Rakesh K. Bajpai, Mark E. Zappi, 2015-10-19. Algae offer potential to produce renewable chemicals and fuels using solar energy and carbon dioxide from atmosphere or in flue gases while simultaneously reducing the generation of greenhouse gases. Since these can be grown on marginal lands with micronutrients and macronutrients often present in waste streams, algae-based chemicals and fuels do not compete with foods. Still, large-scale production of algae-based fuels and chemicals faces considerable technological and economical challenges and it would by necessity require a biorefinery approach wherein all the possible algal components are converted into value-added compounds. The present series on algal biorefineries represents a forum for reporting the state of the art of different technologies as well as the latest advances in this field. The volume II of this series complements the volume I in terms of the current state of the art. Different chapters in this volume address diverse issues ranging from genetically modified algae to new products to life cycle analysis of algal products. *Handbook for the Analysis of Micro-Particles in Archaeological Samples* Amanda G. Henry, 2020-07-07

This handbook provides a resource for those already familiar with some kinds of micro particles who wish to learn more about others or for those just starting out in the study of micro remains who wish to have a broad understanding about microscopic archaeology. Topics covered in this handbook include diatom microfossils, starch granules, pollen grains, phytoliths, natural fibers, volcanic glass, minerals, insect remains, and feathers. Archaeological investigations increasingly rely on specialist identification of microscopic remnants found in sites. These micro particles can provide information about the site environment and human activities that may not be apparent from artifacts and materials preserved on the macro scale and have given us new and often high profile information about our past. The investigation of this invisible archaeology that is invisible to the naked eye is still somewhat new and generally each kind of micro particle is studied individually. Researchers become experts in a narrow range of micro particle types but may be less familiar with or even completely unaware of the multitude of other forms that are frequently encountered in archaeological samples. This handbook's accessible approach is suitable for those at the beginner level. *System Assurances* Prashant Johri, Adarsh Anand, Juri Vain, Jagvinder

Shields,2020-09-29 Why did hundreds of Democratic strongholds break for Donald Trump in 2016 and stay loyal to him in 2020 Looking for answers Muravchik and Shields lived in three such flipped communities There they discovered a political culture that was Trumpy long before the

45th president arrived on the national political scene In these places dominated by the white working class some of the most beloved and longest serving Democratic leaders are themselves Trumpian grandiose combative thin skinned and nepotistic Indifferent to ideology they promise to take care of their people by cutting deals and corners if needed Stressing loyalty they often turn to family to fill critical political roles Trump resembling these old style Democratic bosses strikes a familiar and appealing figure in these communities Although voters in flipped communities have often been portrayed as white supremacists Muravchik and Shields find that their primary political allegiances are to place not race They will spend an extra dollar to patronize local businesses and they think local jobs should go to their neighbors not foreigners from neighboring counties who are just as likely to be white and native born Unlike the Proud Boys they take more pride in their local communities than in their skin color Trump successfully courted these Democrats by promising to revitalize their struggling hometowns Because these communities largely stuck with Trump in 2020 Biden won the presidency by just the thinnest of margins Whether they will continue to support a Republican Party without Trump or swing back to the Democrats depends in part on which party can satisfy these locally grown political tastes and values The party that does that will enjoy a stranglehold in national elections for years to come
