

Thank you for choosing the R4 AIS Transponder System! This quick installation guide serves as a complement to the standard manuals found on the documentation CD. It is designed to give immediate access to essential information when executing an installation and a functionality test. Installation of the R4 AIS System should always be carefully planned and executed by skilled personnel.

Please visit our website for the latest news regarding this and our other shipborne products. Our website contains contact information to our dealers and service stations worldwide and much more.

For the complete manual set please see the included documentation CD.

RECOMMENDED PHYSICAL LOCATION

The Display unit should be available to the navigator at the position from which the ship is normally operated.

The Transponder unit should be installed as close as possible to its GPS and VHF antenna to minimize cable loss, preferably with the LEDs visible.

Temperature and humidity should be moderate and stable. Avoid areas with high flow of humid salt air, high levels of vibrations and shocks or high temperatures.

The display and transponder is interconnected through 4 double twisted pairs. (Transponder ↔ Display + Transponder ↔ Display integrated Pilot Plug). Signal cables may be extended should the standard 2 meter not be enough. Consult TransponderTech before altering any standard configurations (i.e. signal cable lengths).

VHF ANTENNA INSTALLATION

VHF radio frequencies propagation characteristics are close to line of sight. Installation will affect the transmitting and receiving capabilities. General recommendations for antenna placement to minimize the risk for interference and decreased range:

- Coaxial down-leads should be used with shielding screen connected to ground at one end.
- The VHF cable should not be installed close to high-power lines, such as radar or radio-transmitter lines, and at least 10 cm away from any power supply cables.
- The antenna should be mounted above or below other transmitter antennas with no horizontal separation and with a minimum of two meters vertical separation. If it is located on the same level as other antennas, the distance apart should be at least 10 meters.
- The antenna should be installed at least 3 meters away from interfering high-power energy sources, out of the way of the transmitting beam.
- The antenna should be placed in an elevated position, as free standing as possible, with a visible sky of 360° and minimum of 2
