

## 1. Introduction

### 1.1 Problem Statement

Develop an application which facilitates creation of web pages without having a need to install any HTML (Hypertext Markup Language) [1].editor based software and also which can be used by any novice user (No HTML knowledge needed). That is developing web pages on the fly (online).

### 1.2 Project Objectives

*The purpose of WebyWeb is to allow the user to design web pages on the fly.*

Existing guidelines for Web usability hinder web-based application usability since they are primarily based on interactions within a browsing metaphor. The main difference is that with traditional in-house software the user only focuses on the application itself. The application is stand-alone, installed on the users system and the IT department or network administrator takes care of the management, monitoring, updates and all other tasks related to using software in a business environment.

A SaaS (Software as a Service) [2] application also focuses on this primary application part, but incorporates tasks that all together make up the SaaS application and business model. These tasks include registering, paying for the software, using support and customizing the application. A SaaS application is much more specifically directed to the customer instead of a traditional desktop application directed at the mass. This results in a higher value of design and interaction.

This achieves following -

- Centralized Updation
- No installations
- Portable
- Cross Browser
- No piracy
