The Routledge Companion to Labor and Media Richard Maxwell, 2015-07-16 Labor resides at the center of all media and communication production from the workers who create the information technologies that form the dynamic core of the global capitalist system and the designers who create media content to the salvage workers who dismantle the industry's high tech trash. The Routledge Companion to Labor and Media is the first book to bring together representative research from the diverse body of scholarly work surrounding this often fragmentary field and seeks to provide a comprehensive resource for the study and teaching of media and labor. Essays examine work on the mostly unglamorous side of media and cultural production: technology, manufacture, and every occupation in between. Specifically, this book features wide-ranging international case studies spanning the major global hubs of media labor, interdisciplinary approaches for thinking about and analyzing class and labor in information communication technology (ICT), consumer electronics (CE), and media cultural production; an overview of global political economic conditions affecting media workers; reports on chemical environments and their effect on the health of media workers and consumers; activist scholarship on media and labor; and inspiring stories of resistance and solidarity.

Sustainable Media Nicole Starosielski, Janet Walker, 2016-02-19 Sustainable Media explores the many ways that media and environment are intertwined from the exploitation of natural and human resources during media production to the installation and disposal of media in the landscape from people's engagement with environmental issues in film, television, and digital media to the mediating properties of ecologies themselves. Edited by Nicole Starosielski and Janet Walker, the assembled chapters expose how the social and representational practices of media culture are necessarily caught up with technologies, infrastructures, and environments. Through in-depth analyses of media theories, practices, and objects including cell phone towers, ecologically themed video games, Geiger counters for registering radiation, and sound waves traveling through the ocean, contributors question the sustainability of the media we build, exchange, and inhabit and chart emerging alternatives for media ecologies.
