Introduction to Precipitation Reactions

What do you think of when you hear the word precipitation? You most likely have learned that rain, snow, and sleet are all types of precipitation.

In chemistry, the word precipitation has a different meaning: instead of something that falls out of the sky, a precipitate is something that falls out of a solution. One of the ways a precipitate can be formed is when two soluble compounds interact. A soluble compound is one that will dissolve in water. Insoluble compounds do not dissolve in water.

The picture below shows two soluble

compounds combining to form an insoluble compound, also known as a precipitate. Use the information in the picture to identify if each compound is soluble or insoluble.
