Learning Through Teaching Mathematics Roza Leikin,Rina Zazkis,2010-04-10 The idea of teachers Learning through Teaching LTT when presented to a na ve bystander appears as an oxymoron Are we not supposed to learn before we teach After all under the usual circumstances learning is the task for those who are being taught not of those who teach However this book is about the learning of teachers not the learning of students It is an ancient wisdom that the best way to truly learn something is to teach it to others Nevertheless once a teacher has taught a particular topic or concept and consequently truly learned it what is left for this teacher to learn As evident in this book the experience of teaching presents teachers with an exciting opp tunity for learning throughout their entire career This means acquiring a better understanding of what is being taught and moreover learning a variety of new things What these new things may be and how they are learned is addressed in the collection of chapters in this volume LTT is acknowledged by multiple researchers and mathematics educators In the rst chapter Leikin and Zazkis review literature that recognizes this phenomenon and stress that only a small number of studies attend systematically to LTT p cesses The authors in this volume purposefully analyze the teaching of mathematics as a source for teachers own learning **OE [publication]** ,1966 *The New Politics of the Textbook* Heather Hickman,Brad J. Porfilio,2012-10-29 In an era when corporate and political leaders are using their power to control every aspect of the schooling process in North America there has been surprisingly little research on the impact of textbook content on students The contributors of this volume and its partner *The New Politics of the Textbook* Problematizing the Portrayal of Marginalized Groups in Textbooks guide educators school administrators academics and other concerned citizens to unpack the political social and cultural influences inherent in the textbooks of core content areas such as math science English and social science They urge readers to reconsider the role textbooks play in the creation of students political social and moral development and in perpetuating asymmetrical social and economic relationships where social actors are bestowed unearned privileges and entitlements based upon their race gender sexuality class religion and linguistic background Finally they suggest ways to resist the hegemony of those texts through critical analyses critical questioning and critical pedagogies
Mathematics Teachers at Work Janine T. Remillard,Beth A. Herbel-Eisenmann,Gwendolyn M. Lloyd,2011-09-20 This book compiles and synthesizes existing research on teachers use of mathematics curriculum materials and the impact of

curriculum materials on teaching and teachers with a particular emphasis on but not restricted to those materials developed in the 1990s in response to the NCTM s Principles and Standards for School Mathematics Despite the substantial amount of curriculum development activity over the last 15 years and growing scholarly interest in their use the book represents the first compilation of research on teachers and mathematics curriculum materials and the first volume with this focus in any content area in several decades
