practitioners and early career scientists so that population genetic theory and new genomic data can help raise the bar in conserving biodiversity in the most critical 20 year period in the history of life on Earth It is aimed at a global market of applied population geneticists conservation practitioners and natural resource managers working for wildlife and habitat management agencies It will be of particular relevance and use to upper undergraduate and graduate students taking courses in conservation biology conservation genetics and wildlife management Issues in Genomics and Non-Human Genetic Research: 2011 Edition ,2012-01-09 Issues in Genomics and Non Human Genetic Research 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Genomics and Non Human Genetic Research The editors have built Issues in Genomics and Non Human Genetic Research 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about Genomics and Non Human Genetic Research in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Genomics and Non Human Genetic Research 2011 Edition has been produced by the world's leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> Biotechnological Tools in Fisheries and Aquatic Health Management Bijay Kumar Behera,2023-11-22 This edited book is focused on SDG 14 life below water This book covers all aspects of fish biotechnology and health management A detailed description is provided of CRISPR Cas9 technology application in the development of superior variety of fish with better growth disease resistance etc accompanied by numerous helpful photographs and schematic diagrams In addition recent developments in nanotechnology and its application in fisheries production enhancement have been discussed Further topics includes probiotics immunostimulants fish genetic markers bioremediation metagenomics transgenerational immune priming application of cell culture in fisheries and nano biosensor application on fish disease diagnosis pollution monitoring etc are provided in details The book is helpful for researchers teachers students farmers and entrepreneurs in utilizing the knowledge on recent advancements in different aspects of fish genetics and biotechnology for future research and aquaculture production enhancement *Genomics in Aquaculture to Better Understand Species Biology and Accelerate Genetic Progress* José Manuel Yáñez,Ross Houston,Scott Newman,2016-09-15 From a global perspective aquaculture is an activity related to food production with large potential for growth Considering a continuously growing population the efficiency and sustainability of this activity will be crucial to meet the needs of protein for human consumption in the near future However for continuous enhancement of the culture of both fish and shellfish there are still challenges to overcome mostly related to the biology of the cultured species and their interaction with increasingly changing environmental factors Examples of these challenges include early sexual maturation feed meal replacement

immune response to infectious diseases and parasites and temperature and salinity tolerance Moreover it is estimated that less than 10% of the total aquaculture production in the world is based on populations genetically improved by means of artificial selection Thus there is considerable room for implementing breeding schemes aimed at improving productive traits having significant economic impact By far the most economically relevant trait is growth rate which can be efficiently improved by conventional genetic selection i e based on breeding values of selection candidates However there are other important traits that cannot be measured directly on selection candidates such as resistance against infectious and parasitic agents and carcass quality traits e g fillet yield and meat color However these traits can be more efficiently improved using molecular tools to assist breeding programs by means of marker assisted selection using a few markers explaining a high proportion of the trait variation or genomic selection using thousands of markers to estimate genomic breeding values The development and implementation of new technologies applied to molecular biology and genomics such as next generation sequencing methods and high throughput genotyping platforms are allowing the rapid increase of availability of genomic resources in aquaculture species These resources will provide powerful tools to the research community and will aid in the determination of the genetic factors involved in several biological aspects of aquaculture species In this regard it is important to establish discussion in terms of which strategies will be more efficient to solve the primary challenges that are affecting aquaculture systems around the world The main objective of this Research Topic is to provide a forum to communicate recent research and implementation strategies in the use of genomics in aquaculture species with emphasis on 1 a better understanding of fish and shellfish biological processes having considerable impact on aquaculture systems and 2 the efficient incorporation of molecular information into breeding programs to accelerate genetic progress of economically relevant traits
