Mendel's Laws of Heredity

Part 2 (Section 10.1)

Materials:

- Notebook
- "Biology - The Dynamics of Life" textbook

Instructions:

- Paste and complete today's handout in your notebook
- Read pages 255 to 257 of your textbook and answer the following questions.
 1. What did Mendel do with the tall and short pea plants he selected? What did Mendel call the offspring of this cross?

He crossed them to produce new plants. Mendel referred to the offspring of this cross as hybrids.
 2. What are Mendel's first experiments called? Why?

Mendel's first experiments are called monohybrid crosses because *mono* means "one" and the two parent plants differed from each other by a single trait.
 3. Mendel selected a six-foot-tall pea plant and he cross-pollinated it with pollen from a pea plant less than two feet tall. What did he discover after he planted the seeds from this cross? What did he call these plants?

When Mendel planted the seeds from this cross, he found that all of the offspring grew to be as tall as the taller parent. He called these plants first generation.
 4. Next Mendel allowed the tall plants from the first generation to self-pollinate. After the seeds formed, he planted them. What did he discover this time? What did he call this generation of plants?

Mendel found that three-fourths of the plants were as tall as the tall plants in the parent and first generation. He also found that one-fourth of the offspring were as short as the short plants in the parent generation. In other words, tall and short plants occurred in a ratio of about three tall plants to one short plant. He called these plants second generation plants.
