

Case Conceptualization Paper #1

Imagine that you are working with the following client in therapy

Mindy is a 10 year old Caucasian female (she is an only child). Her mom (single parent) brought her to therapy because she says Mindy has been having problems since the divorce of her parents (six months ago). Mindy is having the following symptoms and she is presenting with these symptoms in both school and at home. She is reportedly sad most days of the week. She reports feelings of hopelessness, helplessness, and often cries on and off during the week. She reports difficulty with attention and concentration, her grades are declining in math and science because she is not motivated to do her homework. She often isolates herself in her room and she refuses to help out with the chores. She reportedly plays on the internet for hours and texts her friends all night long. She reports she gets about 5 hours of sleep per night and she denied going for days without sleep. In the session she reports that she sometimes thinks about suicide but she clearly denied a plan. She makes statements like the following: "my life sucks, no one really cares about me, I'll never amount to anything."

Introduction to the Theoretical Model

In this section summarize the previous ONE Theory model that you selected from the list that was indicated above. Describe the main points of these theories, using the language of these theories alone (don't borrow concepts from other theories, stay focused on the one individual Theory and one Family Theory you select and be like an expert). This section should be a minimum of a one page.

Person's Centered Theory was developed by Carl Rogers who is known as a humanistic psychologist. He believed that clients possess the ability to heal themselves, and therapists serve as a tool to help clients access self-correction or creation. Rogers believed that humans are motivated by positive forces and that that is the nature of humans. In other words, humans have this innate tendency to develop or constrictive a healthy capacity.

A key method of Person's Center Theory is positive regard which is the need to receive warmth, accepting, acknowledgement, validation, respect from other people especially the people of significant in clients lives.

Terapeutisk allians och olika sätt att förmedla internetbehandling med KBT vid depression Kristofer Vernmark, 2018-12-12 Depression är en funktionsnedsättande problematik som påverkar en stor del av den vuxna populationen varje år Trots ett omfattande behov av hjälp så råder det brist på tillgång till effektiv behandling Kognitiv Beteendeterapi KBT är en evidensbaserad metod som har stöd vid behandling av

depression och förmiddag via internet skulle metoden kunna tillgångras för fler. Dock är det i dagsläget oklart vilka format och vilket innehåll som kan användas när behandlingen förmiddag via internet samt vilken betydelse den terapeutiska alliansen har för en behandling som till största del sker på distans. Syftet med denna avhandling var att undersöka effekterna för olika format av internetbehandling, epostterapi, guidad självhjälp och blended treatment vid depression samt alliansens roll i dessa format. Studiernas resultat visar på att epostterapi och internetförmiddagade självhjälpsprogram med behandlarstöd var effektiva metoder för att behandla depression. Alliansskattningar var höga vilket visar att en positiv terapeutisk allians kan uppnås i internetbehandling. Patientskattningar av allians kunde inte predicera utfallet i någon av behandlingarna men behandlarskattad allians predicerade förbättring på depressionsskattningar i blended treatment. Den här avhandlingen innehåller den första randomiserade kontrollerade studien på KBT baserad epostterapi vid depression samt det första internetförmiddagade självhjälpsprogrammet baserat på beteendeaktivering och ACT. Depression is a debilitating disorder that affects a large part of the adult population every year. Yet there is still a lack of access to effective care for people in need. Cognitive Behaviour therapy CBT is an evidence based method for treating depression that together with the increased availability of Internet services provides an opportunity to increase access to effective treatment. Internet based interventions can be effective in the treatment of depression but there is a lack of knowledge concerning which formats of delivery that can be used and if therapeutic alliance is of equal importance when providing treatment over the Internet. The overall aim of this thesis was to examine the effects of different treatment formats: email therapy, guided self help and blended treatment in internet based CBT for depression and to further examine the role of alliance in these treatment modalities. Findings from this thesis show that email therapy and internetbased treatment programs were effective methods for treating depression. Alliance ratings were high showing that a positive therapeutic alliance can be achieved in internet based treatments. Patient rated alliance could not predict outcome in any of the different treatment formats. However, therapist rated alliance predicted change in depression during blended treatment. This thesis includes the first randomized controlled study on CBTbased email therapy and the first internet based behavioral activation program with ACT components for adult depression.

Power System Operation and Optimization Considering High Penetration of Renewable Energy Shengyuan Liu, Zhenzhi Lin, Yuqing Dong, Jin Zhao, 2024-09-19. The energy landscape is shifting toward renewable energy sources to mitigate climate change and reduce dependence on fossil fuels. The integration of renewable energy sources into the power grid presents various challenges including uncertainty and variability of renewable energy sources, grid stability and management of energy storage. Power system operation and optimization play a crucial role in managing the energy supply demand balance, reducing operational costs and improving the reliability of the power system. This call for papers aims to bring together the latest research and practical applications related to power system operation and optimization in the context of high penetration of renewable energy sources. We welcome contributions from researchers and practitioners from a broad range

of disciplines to shed light on the challenges and opportunities associated with renewable energy integration in power systems The objective of this Research Topic is to explore the latest advances in power system operation and optimization with a focus on the high penetration of renewable energy sources We invite potential authors to submit articles for publication on the Research Topic of Frontiers in Energy Research on Power System Operation and Optimization Considering the High Penetration of Renewable Energy
