

With SAP2000, you can build your model and later come back to define and assign section properties, or draw and assign section properties at the same time. The order doesn't matter, so we'll do it both ways in this tutorial. First, click Draw frame/cable button as shown, use default FSEC1 section and continuous connection, and click once in the bottom left corner of the grid and double click on the top joint as shown to draw one sloped chord. Snapping to grid intersections and joints is typically how most models are created in SAP2000.
