SAP R/3 Administration Liane Will, 1998. If you are responsible for the administration of an SAP R/3 system or would like to know more about it, this book will show you how to exploit the potential of the R/3 system to maximum effect. SAP R/3 Administration provides a detailed explanation of the technological basis and the development environment of the R/3 system and practical guidance on performance tuning the R/3 system. This book provides detailed coverage of the organization and operation of the R/3 system and the transport system that monitors, coordinates, and logs access to system data. It explains the fundamentals of ABAP/4, the programming language at the heart of the SAP R/3 system, and shows how to program simple reports and understand ABAP/4 programs. With this book, you will learn how to monitor and maintain a live R/3 system, understand different types of R/3 system exchange objects between these systems, and control modifications to the system. Use the CCMS (Computer Center Management System) to observe R/3 operation and evaluate and avoid potential problems early on. The authors have drawn on their own considerable experience in customer support to provide this comprehensive practical guide to the administration and performance tuning of the SAP R/3 system. While you do not have to have any prior knowledge of the R/3 system to read this book, it is assumed that you will have some previous

experience of relational database management systems and SQL. An accompanying disk contains R 3 transport data for the examples featured in the book and is described in Appendix G. **Auditing and GRC Automation in SAP** Maxim

Chuprunov, 2013-04-09 Over the last few years financial statement scandals, cases of fraud and corruption, data protection violations and other legal violations have led to numerous liability cases, damages, claims and losses of reputation. As a reaction to these developments, several regulations have been issued: Corporate Governance, the Sarbanes Oxley Act, IFRS, Basel II and III, Solvency II and BilMoG, to name just a few. In this book, compliance is understood as the process mapped not only in an internal control system that is intended to guarantee conformity with legal requirements but also with internal policies and enterprise objectives in particular, efficiency and profitability. The current literature primarily confines itself to mapping controls in SAP ERP and auditing SAP systems. Maxim Chuprunov not only addresses this subject but extends the aim of internal controls from legal compliance to include efficiency and profitability and then well beyond because a basic understanding of the processes involved in IT-supported compliance management processes are not delivered along with the software. Starting with the requirements for compliance, Part I, he not only answers compliance-relevant questions in the form of an audit guide for an SAP ERP system and in the form of risks and control descriptions, Part II, but also shows how to automate the compliance management process based on SAP GRC. Part III, He thus addresses the current need for solutions for implementing an integrated GRC system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers and consultants responsible for GRC products as readers for his book. They will find indispensable information for their daily work from the first to the last page. In addition, MBA management information system students as well as senior managers like CIOs and CFOs will find a wealth of valuable information on compliance in the SAP ERP environment on GRC in general and its implementation in particular.
