

CHAPTER 6: Formulating The Hypothesis

Experimental Hypothesis- It is a statement that explains the effects of specified antecedent conditions on a measured behavior.

Example of Nonexperimental Hypotheses and Characteristics of Experimental Hypothesis

1. Synthetic Statements

-Are those that can be either true or false. Each experimental hypothesis must be a synthetic statement so that there can be some chance it is true and some chance it is false.

- Non Synthetic Statements should be avoided at all costs.

2 Categories of Non Synthetic Statements

a. Analytic statement - one that is always true

Example: "I am pregnant or I am not pregnant"

b. Contradictory statement - statements with elements that oppose each other because contradictory statements are always false.

Example: I have a brother and I don't have a brother.

2. Testable Statements

- An experimental hypothesis must also be testable-that means for manipulating antecedent conditions and measuring the resulting behavior must exist.

Example: If dogs display muscle twitches and vocalizations during sleep, then they must be dreaming.

3. Falsifiable Statements

- Statements of research hypotheses must be falsifiable by research findings. Hypotheses need to be worded so that failures to find the predicted effects must be considered evidence that the hypothesis is indeed false.

Example: If you read this book carefully enough, then you will be able to design a good experiment.

4. Parsimonious Statements

- Parsimony means that the simplest explanation is preferred.

Ex: If you look at an appealing photograph, then your pupils will dilate would be preferred over "If you look at an appealing photograph, then your pupils will dilate if it is a warm Saturday in June."

5. Fruitful Statements

- There is some indication that a hypothesis is fruitful when we can think of new studies that will become important if the hypothesis is supported.

Example: If a child, Albert, is repeatedly exposed to a loud, cry-inducing noise in the presence of a harmless furry animal, then Albert will begin to cry at the sight of the animal alone."

THE INDUCTIVE MODEL

• The inductive model of formulating a hypothesis, the process of reasoning from specific cases to more general principles, is often used in science and mathematics.

• You observed several specific instances of behavior and used these instances to form a general principle to explain the behavior. You may be able to come up with an interesting idea for testing it experimentally

• B. F. Skinner was a convincing advocate for inductive research in psychology.

The Psychology of Childhood Karl Claudius Garrison, Albert J. Kingston, 1967 *Applied Psychology for Teachers* Wesley C. Becker, 1986 **Supercommunicators** Charles Duhigg, 2024-02-20 NEW YORK TIMES BESTSELLER From the author of

The Power of Habit a fascinating exploration of what makes conversations work and how we can all learn to be supercommunicators at work and in life A winning combination of stories studies and guidance that might well transform the worst communicators you know into some of the best Adam Grant author of *Think Again* and *Hidden Potential* ONE OF NPR'S BEST BOOKS OF THE YEAR FINALIST FOR THE SABEW BEST IN BUSINESS BOOK AWARD Come inside a jury room as one juror leads a starkly divided room to consensus Join a young CIA officer as he recruits a reluctant foreign agent And sit with an accomplished surgeon as he tries and fails to convince yet another cancer patient to opt for the less risky course of treatment In *Supercommunicators* Charles Duhigg blends deep research and his trademark storytelling skills to show how we can all learn to identify and leverage the hidden layers that lurk beneath every conversation Communication is a superpower

and the best communicators understand that whenever we speak we're actually participating in one of three conversations: practical, emotional, and social. What's this really about? How do we feel? Who are we? If you don't know what kind of conversation you're having, you're unlikely to connect. Supercommunicators know the importance of recognizing and then matching each kind of conversation and how to hear the complex emotions, subtle negotiations, and deeply held beliefs that color so much of what we say and how we listen. Our experiences, our values, our emotional lives, and how we see ourselves and others shape every discussion, from who will pick up the kids to how we want to be treated at work. In this book, you will learn why some people are able to make themselves heard and to hear others so clearly. With his storytelling that takes us from the writers' room of *The Big Bang Theory* to the couches of leading marriage counselors, Duhigg shows readers how to recognize these three conversations and teaches us the tips and skills we need to navigate them more successfully. In the end, he delivers a simple but powerful lesson: With the right tools, we can connect with anyone.

Communication

Applications, Text Randall McCutcheon, 2000-04 Reforming Reading, Writing, and Mathematics S. G. Grant, 1998
Represents a study within a study of school reform; the core study looks at how teachers make sense of multiple subject matter reforms; the outer study explores the prospects for the current movement known as systemic reform.

Books in Print Supplement, 2002 **Teachers Edition** Randall McCutcheon, 2001-02 Describes how to research, organize, write, and deliver different kinds of speeches and discusses related forms of communication such as debates and oral interpretation.
