

1. Complete the following paragraphs on static electricity:

The law of attraction and repulsion states that unlike charges will attract one another whereas like charges will repel one another. These charges were named positive and negative. An object with more negative charges than positive charges is said to be negatively charged. An object with more positive charges than negative charges is said to be positively charged. Neutral objects have equal numbers of positive and negative charges.

Charging by contact involves rubbing two neutral objects together. They become electrically charged (one loses electrons and one gains electrons). Charging by contact involves touching a neutral object to a charged object. The neutral object takes on the same charge as the charged object. Charging by contact occurs when a charged object is placed near a grounded neutral object. The neutral objects takes on the opposite charge of the charged object.

2. A metal leaf electroscope can detect the presence of charge. Describe what will happen to the leaves of the electroscope when:

- a) a negatively charged rod is brought near an uncharged electroscope
leaves move farther apart
- b) a positively charged rod is brought near an uncharged electroscope
leaves move closer together

3. Fill in the missing information in the table below. The first one has been completed:

QUANTITY	SYMBOL	UNIT	Unit symbol
current	I	ampere	A
voltage	V	volt	V
resistance	R	ohm	Ω

Use the GRASP method to answer the questions 4-12 in your notebook:

4. What current is drawn by a vacuum cleaner from a 120 V circuit having a resistance of 28 Ω ?

G: $V = 120 \text{ V}$, $R = 28 \Omega$

R: $I = ?$

A: $I = V/R$

S: $I = 120\text{V} / 28 \Omega$
 $= 4.29 \text{ A}$

P: Therefore the current drawn is 4.29 A.

5. What voltage will a battery have if it runs a 2.4 Ω motor with a current of 2.5 A?

G: $R = 2.4 \Omega$, $I = 2.5 \text{ A}$

R: $V = ?$

A: $V = IR$

S: $V = (2.5\text{A})(2.4 \Omega)$
 $V = 6 \text{ V}$

P: Therefore the battery will have a voltage of 6 V.

6. A walkie talkie receiver operates on a 9.0 V battery. If the receiver draws 300 mA of current what is its resistance?

G: $V = 9.0 \text{ V}$, $I = 0.300 \text{ A}$

R: $R = ?$

A: $R = V/I$

S: $R = 9.0 \text{ V} / 0.300 \text{ A}$
 $R = 30 \Omega$

P: Therefore, the walkie talkie has a resistance of 30 Ω .

Review It Electric Charge Answers:

Enjoying the Track of Term: An Emotional Symphony within **Review It Electric Charge Answers**

In a world eaten by displays and the ceaseless chatter of instantaneous transmission, the melodic splendor and psychological symphony developed by the prepared word usually disappear into the backdrop, eclipsed by the constant sound and disturbances that permeate our lives. But, nestled within the pages of **Review It Electric Charge Answers** a stunning literary value brimming with fresh feelings, lies an immersive symphony waiting to be embraced. Constructed by an elegant composer of language, that interesting masterpiece conducts visitors on a psychological trip, well unraveling the concealed tunes and profound impact resonating within each cautiously crafted phrase. Within the depths with this moving analysis, we will explore the book is key harmonies, analyze its enthralling writing fashion, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
