Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 10-week training program consisting of 3 sessions per week. The HR and HRR were measured at rest and during submaximal and maximal exercise at baseline and after 10 weeks. The results showed that the EG had a significant decrease in HR at rest and during submaximal and maximal exercise compared to the CG. The HRR was also significantly higher in the EG compared to the CG. The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or continuous darkness. Tapes that are too long or too short can change the phase of the clock.
- Artificially imposed rhythms will eventually alter all biological rhythms in a population, the length of the day was increased by manipulating the light and sound environment.
- The endogenous clock is therefore the only way to change the phase of a rhythm. The period of a rhythm is genetically determined, however, it is not subject to these periods of adjustment. Natural selection would favor the 24 hour day.

8. Using the information above, determine and fill in the table in the next column. Consider the following questions as hints to attach to the answers:
 - a. What does each cell address? Is the number of cells in each 2, and how many depending on the flow type of flow?
9. Using the above information, record the answer, showing the value in a certain direction in the flow:
 - a. Do the two opposite cells address the same or different flows?
10. Repeat the procedure described above for the opposite flows (flows from the right to the left) and for the flows from the left to the right:
 - a. Is the flow from the left to the right the same as the flow from the right to the left?
 - b. Repeat the entire procedure for the flows in the opposite direction (the right to the left and the left to the right) and record the answers in the next column.
