Powertrain Systems for Net-Zero Transport Institution of Mechanical Engineers (IME), 2021-12-23 The transport sector continues to shift towards alternative

powertrains particularly with the UK Government's announcement to end the sale of petrol and diesel passenger cars by 2030 and increasing support for alternatives. Despite this announcement, the internal combustion continues to play a significant role both in the passenger car market through the use of hybrids and sustainable low carbon fuels as well as a key role in other sectors such as heavy duty vehicles and off-highway applications across the globe. Building on the industry leading IC Engines conference, the 2021 Powertrain Systems for Net Zero Transport conference (7-8 December 2021, London, UK) focussed on the internal combustion engine's role in Net Zero transport as well as covered developments in the wide range of propulsion systems available: electric, fuel cell, sustainable fuels etc. and their associated powertrains. To achieve the net zero transport across the globe, the life cycle analysis of future powertrain and energy was also discussed. Powertrain Systems for Net Zero Transport provided a forum for engine, fuels, e-machine, fuel cell and powertrain experts to look closely at developments in powertrain technology required to meet the demands of the net zero future and global competition in all sectors of the road transportation, off-highway and stationary power industries.

Computational Fluid and Solid Mechanics 2003 K.J. Bathe, 2003-06-02. Bringing together the world's leading researchers and practitioners of computational mechanics, these new volumes meet and build on the eight key challenges for research and development in computational mechanics. Researchers have recently identified eight critical research tasks facing the field of computational mechanics. These tasks have come about because it appears possible to reach a new level of mathematical modelling and numerical solution that will lead to a much deeper understanding of nature and to great improvements in engineering design. The eight tasks are: The automatic solution of mathematical models; Effective numerical schemes for fluid flows; The development of an effective mesh-free numerical solution method; The development of numerical procedures for multiphysics problems; The development of numerical procedures for multiscale problems; The modelling of uncertainties; The analysis of complete life cycles of systems; Education: teaching sound engineering and scientific judgement. Readers of *Computational Fluid and Solid Mechanics 2003* will be able to apply the combined experience of many of the world's leading researchers to their own research needs. Those in academic environments will gain a better insight into the needs and constraints of the industries they are involved with; those in industry will gain a competitive advantage by gaining insight into the cutting-edge research being carried out by colleagues in academia. Features: Bridges the gap between academic researchers and practitioners in industry; Outlines the eight main challenges facing Research and Design in Computational mechanics and offers new insights into the shifting research agenda; Provides a vision of how strong basic and exciting education at university can be harmonized with life-long learning to obtain maximum value from the new powerful tools of analysis.

Design of Reinforced Concrete Silo Groups Fernando A.N. Silva, Bernardo Horowitz, João M.P.Q. Delgado, António C. Azevedo, 2019-04-11 This book offers a new calculation procedure of the structural behavior of grouped layout of silos easy to use and with satisfactory responses Groups of reinforced concrete silos are structures commonly used in the food industry where it is usually necessary to separate the storage of different types and sources of grain The grouped layout of silos has numerous benefits when compared with single cell silos in which the emphasis is on creating further space for silage normally referred to as interstice a space formed between the edges of the group s cells This economic benefit on the other hand raises a structural problem for the designer of this type of building which is to assess the magnitude of bending moments and hoop forces due to the structural continuity of the walls in the interstice region of the cells Bending moments assume extreme values exactly when the interstice is loaded and the other cells in the group are empty To develop the formulation of the proposed analysis models a parametric study was carried out that allowed the adequate consideration of the variables involved The idea is to help professionals engineers industrials and academics involved in this advanced interdisciplinary field as a comprehensive guide for courses offered at different levels of learning undergraduate and postgraduate
