The Mythology of Crime and Criminal Justice Victor E. Kappeler, Gary W. Potter, 2017-07-18 The social construction of crime is often out of proportion to the threat posed The media and advocacy groups shine a spotlight on some crimes and ignore others Street crime is highlighted as putting everyone at risk of victimization while the greater social harms from corporate malfeasance receive far less attention Social arrangements dictate what is defined as crime and the punishments for those who engage in the proscribed behavior Interest groups promote their agendas by appealing to public fears Justifications often have no basis in fact but the public accepts the exaggerations and blames the targeted offenders The net widening effect of more laws and more punishment catches those least able to defend themselves This innovative alternative to traditional textbooks provides insightful observations of myths and trends in criminal justice Fourteen chapters challenge misconceptions about specific crimes or aspects of the criminal justice system Kappeler and Potter dissect popular images of crimes and criminals in a cogent compelling and engaging manner They trace the social construction of each issue and identify the misleading statistics and fears that form the basis of myths and the collateral damage of basing policies on mythical beliefs The authors encourage skepticism about commonly accepted beliefs offer readers a fresh perspective and urge them to analyze important issues from novel vantage points

Plasma Sources of Solar System Magnetospheres Andrew F. Nagy, Michel Blanc, Charles Chappell, Norbert Krupp, 2016-01-27 This volume reviews what we know of the corresponding plasma source for each intrinsically magnetized planet Plasma sources fall essentially in three categories the solar wind the ionosphere both prevalent on Earth and the satellite related sources Throughout the text the case of each planet is described including the characteristics chemical composition and intensity of each source The authors also describe how the plasma generated at the source regions is transported to populate the magnetosphere and how it is later lost To summarize the dominant sources are found to be the solar wind and sputtered surface ions at Mercury the solar wind and ionosphere at Earth the relative importance of the two being discussed in a specific introductory chapter Io at Jupiter and a big surprise of the Cassini findings Enceladus at Saturn The situation for Uranus and Neptune which were investigated by only one fly by each is still open and requires further studies and exploration In the final chapter the book offers a summary of the little we know of Uranus and Neptune then summarizes in a comparative way what we know of plasma sources throughout the solar system and proposes directions for future research

Corporate Risks and Leadership Eduardo E. Mariscotti, 2020-05-13 The context of business has been changing for companies in recent years and following numerous corporate and accounting scandals many countries have increased the number of national and international regulations designed to ensure transparency and compliance with the law Because of the existence of these new regulations the level of control the severity of sanctions by governments and the amount of the fines for noncompliance have increased dramatically In parallel with the technological revolution in communications business management has become more transparent and any

negative event is uploaded to social networks and shared with an indeterminate number of people This change in the regulatory sanctioning and technological context has forced large companies to rethink risks investments and budgets to deal in this more complex environment To transition to this change some companies have included ethics and compliance programs in their corporate agenda along with marketing and sales plans strategies growth targets investment plans and or talent acquisition While each industry has its particular risks in this book the author describes the essential elements that any effective ethics and compliance program should contain This book is a source of information that connects yesterday with today The author shares observations and lessons of the past to suggest corporate leaders implement effective ethics and compliance programs to protect their organizations and themselves The book covers theories of ethics but with an eye focused on practical application Risks ethics and compliance are analyzed with an overall vision connected to the reality of business life without getting bogged down in abstract thinking or in technical and regulatory details Ethics and compliance are disciplines that have increasingly achieved greater recognition in organizations Thus due to the importance of risk management in the business world and the necessary involvement of the CEO and the board of directors it seems appropriate that executives get access to a book about risks ethics compliance and human resources directed not only to compliance experts but also to any organizational leader This book is a wake up call that allows business leaders to understand the benefits of implementing an effective ethics and compliance program that will help members of organizations to make the right decisions and act within the law If they do they can better prevent and react to the difficult obstacle course of risks dangers and threats that organizations face and that may jeopardize the sustainability resilience and survival of companies

Basic Calculus of Planetary Orbits and Interplanetary Flight Alexander J. Hahn, 2020-03-14 Intended for a one or two semester course this text applies basic one variable calculus to analyze the motion both of planets in their orbits as well as interplanetary spacecraft in their trajectories The remarkable spacecraft missions to the inner and outermost reaches of our solar system have been one of the greatest success stories of modern human history Much of the underlying mathematical story is presented alongside the astonishing images and extensive data that NASA's Voyager NEAR Shoemaker Cassini and Juno missions have sent back to us First and second year college students in mathematics engineering or science and those seeking an enriching independent study will experience the mathematical language and methods of single variable calculus within their application to relevant conceptual and strategic aspects of the navigation of a spacecraft The reader is expected to have taken one or two semesters of the basic calculus of derivatives integrals and the role that limits play Additional prerequisites include knowledge of coordinate plane geometry basic trigonometry functions and graphs including trig inverse exponential and log functions The discussions begin with the rich history of humanity's efforts to understand the universe from the Greeks to Newton and the Scientific Revolution to Hubble and galaxies to NASA and the space missions The calculus of polar functions that plays a central mathematical role is presented in a self contained way in complete detail

Each of the six chapters is followed by an extensive problem set that deals with and also expands on the concerns of the chapter. The instructor has the flexibility to engage them with greater or lesser intensity. I have been an aerospace engineer for 39 years and honestly it would be hard for me to overstate how valuable I believe this book will be to numerous scientific and engineering disciplines and in particular to the future of aerospace engineering. This book is perfectly crafted to motivate, educate, and prepare the scientists and engineers who wish to reach for the sky and beyond.

Dr Mario Zoccoli, Aerospace Engineer, NASA and Lockheed Martin

Planetary Atmospheric Electricity, François Leblanc, Karen Aplin, Yoav Yair, Giles Harrison, Jean Pierre Lebreton, M. Blanc, 2008-10-01. This book is a comprehensive discussion of all issues related to atmospheric electricity in our solar system. It details atmospheric electricity on Earth and other planets and discusses the development of instruments used for observation.

Scientific and Technical Aerospace Reports, **The Aviation History**, Rely Victoria Petrescu, Florian Ion Petrescu, 2013. According to Aulus Gellius, Archytas the Ancient Greek philosopher, mathematician, astronomer, statesman, and strategist was reputed to have designed and built around 400 BC the first artificial self-propelled flying device: a bird-shaped model propelled by a jet of what was probably steam, said to have actually flown some 200 metres. This machine, which its inventor called *The Pigeon*, may have been suspended on a wire or pivot for its flight.

The 9th-century Muslim Berber inventor Abbas Ibn Firnas's glider is considered by John Harding to be the first attempt at heavier-than-air flight in aviation history. In 1010 AD, an English monk, Eilmer of Malmesbury, purportedly piloted a primitive gliding craft from the tower of Malmesbury Abbey. Eilmer was said to have flown over 200 yards (180 m) before landing, breaking both his legs. He later remarked that the only reason he did not fly further was because he forgot to give it a tail, and he was about to add one when his concerned Abbot forbade him any further experiments.

Bartolomeu de Gusmão, Brazil and Portugal, an experimenter with early airship designs. In 1709, he demonstrated a small airship model before the Portuguese court but never succeeded with a full-scale model.

Pierre de Rozier, Paris, France, first trip by a human in a free-flying balloon. The *Montgolfière*, built by Joseph-Michel and Jacques-Étienne Montgolfier, 9 km covered in 25 minutes on October 15, 1783. See *Le Globe* below for first unmanned flight 2 months earlier.

Professor Jacques Charles and Les Frères Robert, two French brothers, Anne-Jean and Nicolas-Louis, variously shared three milestones of pioneering flight.

Le Globe, the first unmanned hydrogen gas balloon, flew on 26 August 1783. On 1 December 1783, *La Charlière*, piloted by Jacques Charles and Nicolas-Louis Robert, made the first manned hydrogen balloon flight.

In 1951, the Lockheed XFV-1 and the Convair XFV-1 tail-sitters were both designed around the Allison YT40 turboprop engine.

Cobalt Cover-Up, Lance Cooper, 2020-02-25. Following a deadly car crash, small-town lawyer Lance Cooper risked everything to battle one of the most powerful auto corporations in the world to get justice for a young woman. A fast-paced journalistic account of tragedy turned to triumph, despair to hope. *Cobalt Cover-Up* is an inspirational, thoroughly compelling, and victorious read. In the midst of his own family struggles, small-town Georgia lawyer Lance Cooper agreed to defend Ken and

Beth Melton and investigate the deadly accident that killed their daughter Brooke after she inexplicably lost control of her Chevy Cobalt But what started as a heartbreaking yet all too common lawsuit quickly escalated into a David vs Goliath case when Cooper discovered shocking evidence that General Motors concealed an ignition switch defect for nearly a decade resulting in 124 deaths including Brooke s and risking the lives of millions more Despite GM s settlement offers and attempts to bury evidence Cooper refused to back down and worked tirelessly to expose the truth Locked in a tenacious legal fight Cooper and the Meltons faced incredible odds Ken and Beth losing jobs and suffering the difficulty of grieving a beloved daughter during a court battle Cooper risking his reputation and private practice against the overwhelming opposition from GM s team of lawyers and both parties facing massive financial strain Yet in the relentless pursuit for justice and to protect future innocent lives this small town lawyer and a working class American couple stared down the biggest US auto manufacturing mogul and ultimately transformed the entire industry
