Human By Nature Peter Weingart, Sandra D. Mitchell, Peter J. Richerson, Sabine Maasen, 2013-06-17 Representing a wide
range of disciplines biology sociology anthropology economics human ethology psychology primatology history and
philosophy of science the contributors to this book recently spent a complete academic year at the Center for
Interdisciplinary Research ZiF discussing a plethora of new insights in reference to human cultural evolution These scholars
acted as a living experiment of interdisciplinarity in vivo The assumption of this experiment was that the scholars while
working and residing at the ZiF would be united intellectually as well as socially a connection that might eventually enhance
future interdisciplinary communication even after the research group had dispersed An important consensus emerged The
issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural and hence
to the disciplinary division of scientific labor The appropriate place for the study of human culture in this group's view is
located between biology and the social sciences Explicitly avoiding biological and sociological reductionisms the group
adopted a pluralistic perspective integrative pluralism that took into account both today's highly specialized and effective sub
disciplinary research and the possibility of integrating the respective findings on a case by case basis Each sub group
discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of
several types of fruitful cooperation such as a fully integrated chapter a multidisciplinary overview or a discussion between
different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human
culture this book will be of interest to social scientists and biologists alike **Evidential Statistics, Model Identification,
