Perception-Cognition Interface & Cross-Modal Experiences: Insights into Unified Consciousness Aleksandra Mroczko-Wąsowicz, 2017-01-26 The present Research Topic explores closely related aspects of mental functioning namely an interplay between perception and cognition interactions among various sensory modalities and finally more or less unified conscious experiences arising in the context of these relations Contributions emphasize a high flexibility observed in perception and may be seen as potential challenges to the traditional modular architecture of perceptual systems Although the articles describe different phenomena they follow one common theme to investigate broadly understood unified experience by studying either perception cognition integration or the integration between sensory modalities These integrative processes may well apply to subpersonal unconscious representations However the aim here is to approach phenomenal experience and thus a straightforward way of thinking about it is in terms of conscious perception Putting together scientific and philosophical concerns this special issue encourages extending the study of perceptual experience beyond the single sense perception to advance our understanding of the complex interdependencies between different sensory modalities other mental domains and various kinds of unifying relations within conscious experience It exhibits a remarkable need to study these phenomena in tandem and so the authors examine a variety of ways in which our perceptual experiences may be cross modal or multisensory integrated embodied synesthetic cognitively penetrated or otherwise affected by top down influences The Research Topic comprises theoretical and empirical contributions of such

fields as philosophy of mind cognitive science psychology and neuroscience in the form of hypothesis and theory articles original research articles opinion papers reviews and commentaries

Common Sense Metaphysics Luis Oliveira, Kevin Corcoran, 2020-12-28 This book celebrates the research career of Lynne Rudder Baker by presenting sixteen new and critical essays from admiring students colleagues interlocutors and friends Baker was a trenchant critic of physicalist conceptions of the universe She was a staunch defender of a kind of practical realism what she sometimes called a metaphysics of everyday life It was this general common sense philosophical outlook that underwrote her famous constitution view of reality Whereas most of her contemporaries were in general given to metaphysical reductionism and eliminativism Baker was unapologetic and philosophically deft in her defense of ontological pluralism The essays in this book engage with all aspects of her unique and influential work practical realism about the mind the constitution view of human persons the first person perspective and God Christianity and naturalism Common Sense Metaphysics will be of interest to scholars of Baker's work as well as scholars and advanced students engaged in research on various topics in metaphysics philosophy of mind philosophy of language and philosophy of religion

Self-consciousness and "split" Brains Elizabeth Schechter, 2018 Could a single human being ever have multiple conscious minds Some human beings do The corpus callosum is a large pathway connecting the two hemispheres of the brain In the second half of the twentieth century a number of people had this pathway cut through as a treatment for epilepsy They became colloquially known as split brain subjects After the two hemispheres of the brain are cortically separated in this way they begin to operate unusually independently of each other in the realm of thought action and conscious experience almost as if each hemisphere now had a mind of its own Philosophical discussion of the split brain cases has overwhelmingly focused on questions of psychological identity in split brain subjects questions like How many subjects of experience is a split brain subject How many intentional agents How many persons On the one hand under experimental conditions split brain subjects often act in ways difficult to understand except in terms of each of them having two distinct streams or centers of consciousness Split brain subjects thus evoke the duality intuition that a single split brain human being is somehow composed of two thinking experiencing and acting things On the other hand a split brain subject nonetheless seems like one of us at the end of the day rather than like two people sharing one body In other words split brain subjects also evoke the unity intuition that a split brain subject is one person Elizabeth Schechter argues that there are in fact two minds subjects of experience and intentional agents inside each split brain human being right and left On the other hand each split brain subject is nonetheless one of us The key to reconciling these two claims is to understand the ways in which each of us is transformed by self consciousness

The World at Our Fingertips Frédérique de Vignemont, Andrea Serino, Hong Yu Wong, Alessandro Farnè, 2021 Research into peripersonal space has yielded exciting discoveries across many fields from anthropology to cognitive neuroscience Bringing these perspectives together for the first time The World at Our Fingertips presents a fresh accessible dialogue challenging entrenched ideas about the way people see and understand the

Nathan Oaklander, 2014-11-27 A core topic in metaphysics time is also central to issues in the philosophy of science the philosophy of mind and the philosophy of religion *Debates in the Metaphysics of Time* explores these close philosophical connections and tackles the contemporary debates using an interactive approach Contributors put forward their views before commenting on the ideas of other contributors and defending against objections Divided into metaphysics and time consciousness and time and God time and human freedom chapters are organized around key questions including How are we to understand the passage of time or the change an event seems to undergo when it moves from the future to the present and then recedes into the more and more distant past Can we only be directly aware of what is momentary if we directly experience change and duration How is God related to time and is divine foreknowledge and human freedom compatible For students and researchers looking to understand the latest arguments in the philosophy of time *Debates in the Metaphysics of Time* provides an original up to date and accessible account of past present and future debates *Molyneux's Question and the History of Philosophy* Gabriele Ferretti, Brian Glenney, 2020-09-15 In 1688 the Irish scientist and politician William Molyneux sent a letter to the philosopher John Locke In it he asked him a question could someone who was born blind and able to distinguish a globe and a cube by touch be able to immediately distinguish and name these shapes by sight if given the ability to see The philosophical puzzle offered in Molyneux's letter fascinated not only Locke but major thinkers such as Leibniz Berkeley Diderot Reid and numerous others including psychologists and cognitive scientists today Does such a question represent a philosophical puzzle or a problem that can be solved by experimental tests Can vision be fully restored after blindness What is the relation between vision and touch Are the senses linked through learning or bound at birth *Molyneux's Question and the History of Philosophy* is a major collection of essays that explore the long standing issues

Molyneux's problem presents to philosophy of mind perception and the senses. In addition, the volume considers the question from an interdisciplinary angle, examines the pre-history of the question and aspects of it that have been ignored, such as perspectives from religion and disability. As such, Molyneux's Question and the History of Philosophy presents a set of philosophically rich, empirically informed and scientifically rigorous original investigations into this famous puzzle. It will be of great interest to students and researchers in philosophy, psychology and the cognitive sciences, including neuroscience, neurobiology and ophthalmology, as well as those studying the mind, perception and the senses. **The Blackwell**

Companion to Substance Dualism Jonathan J. Loose, Angus J. L. Menzies, J. P. Moreland, 2018-05-01 THE BLACKWELL COMPANION TO SUBSTANCE DUALISM This is a terrific volume by a long way the best currently available anthology on dualism and a worthy addition to Blackwell's distinguished series of Companions. Tim Crane, Central European University. A major contribution to an ongoing transformation of analytic philosophy of mind. Howard Robinson, Central European University. This high quality volume offers a rich variety of perspectives on substance dualism and will be a valuable resource for students and researchers in philosophy of mind and philosophy of religion. John Cottingham, University of Reading. Thorough and fair, the quality of the essays is high. This will certainly be the book on substance dualism. Michael Tye, University of Texas at Austin. Substance dualism has for some time been dismissed as an archaic and defeated position in philosophy of mind, but in recent years the topic has experienced a resurgence of scholarly interest and has been restored to contemporary prominence by a growing minority of philosophers prepared to interrogate the core principles upon which past objections and misunderstandings rest. As the first book of its kind to bring together a collection of contemporary writing from top proponents and critics in a pro contra format, the Blackwell Companion to Substance Dualism captures this ongoing dialogue and sets the stage for rigorous and lively discourse around dualist and physicalist accounts of human persons in philosophy. Chapters explore emergent Thomistic Cartesian and other forms of substance dualism broadly conceived in dialogue with leading varieties of physicalism, including animalism, non-reductive physicalism and constitution theory. Loose, Menzies and Moreland pair essays from dualist advocates with astute criticism from physicalist opponents and vice versa, highlighting points of contrast for readers in thematic sections while showcasing today's leading minds engaged in direct debate. Taken together, essays provide nuanced paths of introduction for students and capture the imagination of professional philosophers looking to expand their understanding of the subject. Skillfully curated and in touch with contemporary science as well as analytic theology, the Blackwell Companion to Substance Dualism strikes a measured balance between advocacy and criticism and is a first-rate resource for researchers, scholars and students of philosophy, theology and neuroscience.

Experienced Wholeness Wanja Wiese, 2018-01-05 An interdisciplinary account of phenomenal unity investigating how experiential wholes can be characterized and how such characterizations can be analyzed computationally. How can we account for phenomenal unity? That is, how can we characterize and explain our experience of objects and groups of objects?

bodily experiences successions of events and the attentional structure of consciousness as wholes In this book Wanjia Wiese develops an interdisciplinary account of phenomenal unity investigating how experiential wholes can be characterized and how such characterization can be analyzed conceptually as well as computationally Wiese first addresses how the unity of consciousness can be characterized phenomenologically discussing what it is like to experience wholes and what is the experiential contribution of phenomenal unity Considering the associated conceptual and empirical issues he draws connections to phenomenological accounts and research on Gestalt theory The results show how the attentional structure of experience the experience of temporal flow and different types of experiential wholes contribute to our sense of phenomenal unity Moreover characterizing phenomenal unity in terms of the existence of a single global phenomenal state is neither necessary nor sufficient to adequately address the problem of phenomenal unity Wiese then suggests that the concepts and ideas of predictive processing can be used to analyze phenomenal unity computationally The result is both a conceptual framework and an interdisciplinary account the regularity account of phenomenal unity According to this account experienced wholes correspond to a hierarchy of connecting regularities The brain tracks these regularities by hierarchical prediction error minimization which approximates hierarchical Bayesian inference

Philosophy of Perception William Fish, 2021-06-29 The philosophy of perception investigates the nature of our sensory experiences and their relation to reality In the second edition of this popular book William Fish introduces the subject thematically setting out the major theories of perception together with their motivations and attendant problems While providing historical background to debates in the field this comprehensive overview focuses on recent presentations and defenses of the different theories and looks beyond visual perception to take into account the role of other senses The second edition organizes the contents into two main parts

Methodological Issues in Consciousness Research, volume II Axel Cleeremans, 2025-04-16 This Research Topic is the second volume of the Research Topic Methodological Issues in Consciousness Research Please see the first volume here The simplest and perhaps the first notion of consciousness in the West as a sentience or awareness of internal or external existence was introduced in the Seventeenth century by the English physician Robert Fludd though similar and even more refined notions of consciousness were developed centuries before in Indian philosophy and contemplative wisdom traditions Because it permeates human existence in so many different ways the study of consciousness is a profoundly interdisciplinary endeavour and engages disciplines such as philosophy including Eastern philosophy cognitive neuroscience anthropology psychiatry and psychopathology and even physics The study of consciousness may involve domains as diverse as perceptual awareness cognition and metacognition reasoning executive control theory of mind self sleep and dreaming emotional competence and

empathy It concerns both healthy e.g. aging, meditation, spiritual experiences and pathological conditions e.g. epilepsy, neglect and locked-in syndromes, minimally conscious states, anesthesia and involves considerations operating at different time scales e.g. evolution, development, expertise. Today, however, and despite almost thirty years of concerted interdisciplinary efforts, the nature and mechanisms of consciousness remain as elusive as ever. Theoretically different conceptual frameworks aimed at characterizing both its functional and phenomenal aspects take sometimes radically different assumptions as their starting point but often fail to make sufficiently precise differential predictions to be falsifiable. While most recent views generally consider methods investigating human higher-order reflective or access consciousness, the theoretical and experimental foundations of primary proto-consciousness often remain vague and ignore evolutionary considerations. Influential distinctions such as the distinction between phenomenal and access consciousness, between pre-reflective minimal and the reflective narrative self, between graded and all-or-none processing or even between conscious and unconscious processing all remain unsettled or controversial. The field is also rife with methodological challenges and controversies, some of which remain largely unsolved. Questions such as how to best measure awareness or how to establish its absence, issues such as what kind of neuroscientific data would convincingly make it possible to isolate the neural correlates of consciousness or what types of confounds contaminate extant findings, challenges such as how to imagine crucial experiments that are sufficiently sensitive to falsify some theoretical proposals all need to be addressed in open interdisciplinary dialogue. This Frontiers Research Topic is aimed at stimulating discussion about current methodological issues and trends in consciousness research. We welcome theoretical and empirical contributions as well as empirical articles from both experts and young scientists who work in the field of consciousness research. Submissions of related hypotheses, original research articles, case reports, perspectives, reviews, opinions and commentaries are welcome. We very much hope that this Frontiers Research Topic will contribute to enhancing our characterization and understanding of the methodological and conceptual challenges associated with the study of human consciousness.

Combining Minds Luke Roelofs, 2019-01-28. This book explores how groups of interacting minds relate to singular minds. Roelofs argue that we are too used to seeing the mind as an indivisible unity and that properly understanding our place in nature requires more willingness to see minds as composite systems, both one and many.
