Library Technical Services Stacey Marien,2020-08-15

Libraries are experiencing major changes concerning the role of technical services. Technical services librarians also are being challenged about their relevance and role, sometimes revealed by a lack of understanding of the contribution technical services librarians make to building and curating library and archival collections. The threats are real: relocation from central facilities, the dramatic shift to electronic resources, budgetary constraints, and outsourced processing. As a result, technical services departments are reinventing themselves to respond to these and similar challenges while embracing innovative methods and opportunities to advance librarianship in the twenty-first century. Library Technical Services provides case studies that highlight difficult realities yet embrace exciting opportunities such as space reclamation, evolving vendor partnerships, metadata retraining, and managing personnel, special collections, and distance education. Written for catalog and metadata librarians and managers of technical services units, this book will inspire and provide practical advice and examples for solving issues many libraries are facing today.

Atlas of Knowledge Katy Borner, 2015-03-20 The power of mapping principles for visualizing knowledge illustrated by many stunning large-scale full-color maps. Maps of physical spaces locate us in the world and help us navigate unfamiliar routes. Maps of topical spaces help us visualize the extent and structure of our collective knowledge; they reveal bursts of activity, pathways of ideas, and borders that beg to be crossed. This book from the author of *Atlas of Science* describes the power of topical maps, providing readers with principles for visualizing knowledge and offering as examples forty large-scale and more than 100 small-scale full-color maps. Today, data literacy is becoming as important as language literacy. Well-designed visualizations can rescue us from a sea of data, helping us to make sense of information, connect ideas, and make better decisions in real time. In *Atlas of Knowledge*, leading visualization expert Katy Borner makes the case for a systems science approach to science and technology studies and explains different types and levels of analysis. Drawing on fifteen years of teaching and tool development, she introduces a theoretical framework meant to guide readers through user and task analysis, data preparation, analysis, and visualization, visualization deployment, and the interpretation of science maps. To exemplify the framework, the *Atlas* features striking and enlightening new maps from the popular *Places Spaces Mapping Science* exhibit that range from Key Events in the Development of the Video Tape Recorder to Mobile Landscapes, Location Data from Cell Phones for Urban Analysis, to Literary Empires, Mapping Temporal and Spatial Settings of Victorian Poetry, to Seeing Standards: A Visualization of the Metadata Universe. She also discusses the possible effect of science maps on the practice of science.
