Mungai, 2016-10-26 This book covers issues that pertain to high need schools but the authors challenge the distinctions made in the research and reason that the issues are relevant to all schools From the rise of accountability in the 1960s to now high need schools have been dealing with curriculum program initiatives and responding to diverse populations typically without the resources necessary to implement change In this book we discuss important issues that have to be tackled if we as educators will succeed in meeting the needs of the next generation From education laws use of technology leadership diversity and multicultural issues teaching in high need schools curriculum and teaching student with special needs the book explores both problems and solutions changing the dialogue from one of blame and stasis to one of action and hope Data and Teaching Joseph P. McDonald, Nora M. Isacoff, Dana Karin, 2018-06-22 Data use in teaching is at the heart of current educational policy and school improvement efforts Dispelling magical thinking that it is a simple solution to underachieving schools this timely book explores what data use in teaching really is how it works in theory and practice and why it sometimes fails to achieve expected goals Drawing on their research in nine of New York City's most poverty impacted schools the authors dive deep into school systems and routines as well as into teachers practices and students experiences They also zoom out to capture the larger currents that have made this school reform strategy so prominent today Each chapter includes a discussion of a new direction that schools and teachers can take to ensure that data use in teaching actually spurs growth in learning This

resource extracts lessons from both chaotic and productive data implementation in order to inform practice and fulfill hopes for better schooling richer teaching and deeper learning Book Features Provides practical guidelines for effective use of data in schools and classrooms Includes vivid descriptions and relatable narratives Explores in rich detail what teaching is and how it works Combines insightful ideas and powerful stories with concrete steps for improvement

**Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives** Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence

this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
