Algorithms to Live By Brian Christian,Tom Griffiths,2016-04-19 An exploration of how computer algorithms can be applied to our everyday lives to solve common decision making problems and illuminate the workings of the human mind What should we do or leave undone in a day or a lifetime How much messiness should we accept What balance of the new and familiar is the most fulfilling These may seem like uniquely human quandaries but they are not Computers like us confront limited space and time so computer scientists have been grappling with similar problems for decades And the solutions they ve found have much to teach us In a dazzlingly interdisciplinary work Brian Christian and Tom Griffiths show how algorithms developed for computers also untangle very human questions They explain how to have better hunches and when to leave things to chance how to deal with overwhelming choices and how best to connect with others From finding a spouse to finding a parking spot from organizing one s inbox to peering into the future Algorithms to Live By transforms the wisdom of computer science into strategies for human living

Data-Intensive Workflow Management Daniel C. M. de Oliveira, Ji Liu, Esther Pacitti, 2022-06-01 Workflows may be defined as abstractions used to model the coherent flow of activities in the context of an in silico scientific experiment They are employed in many domains of science such as bioinformatics astronomy and engineering Such workflows usually present a considerable number of activities and activations i.e. tasks associated with activities and may need a long time for execution Due to the continuous need to store and process data efficiently making them data intensive workflows high performance computing environments allied to parallelization techniques are used to run these workflows At the beginning of the 2010s cloud technologies emerged as a promising environment to run scientific workflows By using clouds scientists have expanded beyond single parallel computers to hundreds or even thousands of virtual machines More recently Data Intensive Scalable Computing DISC frameworks e.g. Apache Spark and Hadoop and environments emerged and are being used to execute data intensive workflows DISC environments are composed of processors and disks in large commodity computing clusters connected using high speed communications switches and networks The main advantage of DISC frameworks is that they support and grant efficient in memory data management for large scale applications such as data intensive workflows However the execution of workflows in cloud and DISC environments raise many challenges such as scheduling workflow activities and activations managing produced data collecting provenance data etc Several existing approaches deal with the challenges mentioned earlier This way there is a real need for understanding how to manage these workflows and various big data platforms that have been developed and introduced As such this book can help researchers understand how linking workflow management with Data Intensive Scalable Computing can help in understanding and analyzing scientific big data In this book we aim to identify and distill the body of work on workflow management in clouds and DISC environments We start by discussing the basic principles of data intensive scientific workflows Next we present two workflows that are executed in a single site and multi site clouds taking advantage of provenance Afterward we go towards workflow management in DISC environments and we present in detail solutions that enable the optimized execution of the workflow using frameworks such as Apache Spark

and its extensions *Distributed Planning for Self-Organizing Production Systems* Pfrommer, Julius, 2024-06-04 In dieser Arbeit wird ein Ansatz entwickelt um eine automatische Anpassung des Verhaltens von Produktionsanlagen an wechselnde Aufträge und Rahmenbedingungen zu erreichen Dabei kommt das Prinzip der Selbstorganisation durch verteilte Planung zum Einsatz Most production processes are rigid not only by way of the physical layout of machines and their integration but also by the custom programming of the control logic for the integration of components to a production systems Changes are time and resource expensive This makes the production of small lot sizes of customized products economically challenging This work develops solutions for the automated adaptation of production systems based on self organisation and distributed planning
