Computational Logic in Multi-Agent Systems João Leite,Tran Cao Son,Paolo Torroni,Leon van der Torre,Stefan Woltran,2013-09-10 This book constitutes the proceedings of the 14th International Workshop on Computational Logic in Multi Agent Systems CLIMA XIV held in Corunna Spain in September 2013 The 23 regular papers were carefully reviewed and selected from 44 submissions and presented with four invited talks The purpose of the CLIMA workshops is to provide a forum for discussing techniques based on computational logic for representing programming and reasoning about agents and multi agent systems in a formal way This edition will feature two special sessions Argumentation Technologies and Norms and Normative Multi Agent Systems

Collected Works (volume 1): Published Papers Stephen Luttrell,2023-10-24 The motivation for the research that is described in these volumes is the wish to explain things in terms of their underlying causes rather than merely being satisfied with phenomenological descriptions When this reductionist approach is applied to information processing it allows the internal structure of information to be analysed so information processing algorithms can then be derived from first principles One of the simplest examples of this approach is the diagonalisation of a data covariance matrix there are many variants of this basic approach such as singular value decomposition in which the assumed independent components of high dimensional data are identified and extracted The main limitation of this type of information analysis approach is that it is based on linear algebra applied globally to the data space so it is unable to preserve information about any local data structure in the data space For instance if the data lives on a low dimensional curved manifold embedded in the data space then only the global properties of this manifold would be preserved by global linear algebra methods In practice data whose high dimensional structure is non trivial typically lives on a noisy version of a curved manifold so techniques for analysing such data must automatically handle this type of structure For instance a blurred image of a point source is described by its underlying degrees of freedom i e the position of the source and as the source moves about it generates a curved manifold that lives in the high dimensional space of pixel values of the sampled image The basic problem is then to deduce the internal properties of this manifold by analysing examples of such images A more challenging problem would be to extend this analysis to images that contain several overlapping blurred images of point sources and so on There is no limit to the complexity of the types of high dimensional data that one might want to analyse These methods then need to be automated so

that they do not rely on human intervention which would then allow them to be inserted as components into information processing networks The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis Self organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically Initial Reports of the Deep Sea Drilling Project Scripps Institution of Oceanography,1969

AI*IA 2013: Advances in Artificial Intelligence Matteo Baldoni,Cristina Baroglio,Guido Boella,Roberto Micalizio,2013-12-09 This book constitutes the refereed proceedings of the 13th International Conference of the Italian Association for Artificial Intelligence AI IA 2013 held in Turin Italy in December 2013 The 45 revised full papers were carefully reviewed and selected from 86 submissions The conference covers broadly the many aspects of theoretical and applied Artificial Intelligence as follows knowledge representation and reasoning machine learning natural language processing planning distributed AI robotics and MAS recommender systems and semantic Web and AI applications

Computational Argumentation: a Foundation for Human-centric AI Antonis Kakas,Loizos Michael,Emmanuelle Dietz,2024-11-19 Human centric AI aims at designing and developing systems that operate along with humans in a cognitively compatible and synergetic way Such systems are required to exhibit human like cognitive abilities and intelligence either at the general level of the human population or at some specialized level of expertise in a specific field In either case human centric AI systems exist as expert companions or peers of their human users that would operate alongside them to support and enhance their capabilities
