Good Laboratory Practice

Jürg P. Seiler, 2012-12-06 After more than twenty years of use Good Laboratory Practice or GLP has attained a secure place in the world of testing chemicals and other test items with regard to their safety for humans and the environment Gone are the days when the GLP regulations were hotly debated amongst scientists in academia and industry and were accused of stifling flexibility in imaginative approaches to and science based conduct of all kinds of studies concerned with toxic effects and other parameters important for the evaluation and assessment of products submitted for registration and permission to market The GLP regulations have developed from rules on how to exactly document the planning conduct and reporting of toxicity studies to a quality system for the management of a multitude of study types from the simple determination of a physical chemical parameter to the most complex field tests or ecotoxicology studies At the same time the term Good Laboratory Practice has become somewhat of a slogan with the aim to characterise any reliably conducted laboratory work
