Image, Reality and Media Construction Fengmin Yan, 2019-09-24 This book explores how news media construct social issues and events and thereby convey certain perceptions within the scope of framing theory By operationalizing media framing as a process of interpretation through defining problem diagnosing causes making moral judgments and suggesting solutions the book proposes a systematic and transparent approach to images in news discourse Based on a frame analysis it examines how German news media framed a list of China related issues and events and thereby conveyed particular beliefs and opinions on this country Moreover it investigates whether there were dominant patterns of interpretation and the extent to which diverse views were evident by comparing two major daily newspapers with opposite political orientations the FAZ and the taz Motivated by the relationship between image and reality the book explores image formation and persistence from media construction of meaning and human cognitive complexity in perceiving others Media select certain issues and events and then interpret them from particular perspectives A variety of professional and non professional factors behind news making may result in biased representations In addition from a social psychological perspective inaccurate perceptions of foreign cultures may arise from categorical thinking biased processing of stimulus information intergroup conflicts of interest and in group favoritism Accordingly whether media coverage deviates from reality is not the main concern of this book instead it emphasizes the underlying logics upon which the conclusions and judgments were drawn It therefore contributes to a rational understanding of Western discourse and holds practical implications for both Chinese public diplomacy and a more constructive role of news media in promoting the understanding of others **Management Principles** P. J. Smit, 2007 Book CD To improve on an award winning book poses a major challenge to its authors The authors of this book took the challenge head on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa and the rest of Africa The findings of this study which dealt with current and near future management issues as well as classical and contemporary thinking about management were used as the blueprint for the updating of this book After placing management in context the authors deal

with the knowledge skills and dispositions required of managers to perform the management functions of planning organising leading and controlling in a volatile business world Examples of how the functions are applied in practice are cited throughout the book These examples refer mainly to South African organisations and situations that managers in South Africa and Africa have to deal with to create and sustain a competitive advantage for their organisations The book endeavours to break down the silo effect of seeing the management functions as separate activities This is done by continuously placing the management function at hand in a bigger context This enables learners of management to assess the implications of management decisions on different people processes systems and so on that make up the organisation
