

LYMPHATIC SYSTEM KEY POINTS

1. Function:

- Drains blood plasma and interstitial fluids to avoid excess fluids in body tissues
- Absorbs fat and fat-soluble materials from the small intestine
- Aids in production and maturation of lymphocytes for our body's immunity

2. Lymph – the watery fluid that circulates throughout the lymphatic system

composition: watery fluid, bacteria, cell debris, lymphocytes, fat globules

source: excess blood plasma that leaks from capillary walls to the body tissues

3. Lymphatic Vessels – where lymph flows, usually runs side by side with blood vessels

- **Lymph Capillaries** – where interstitial fluids from tissues collect
- **Large Lymph Vessels** – where lymph capillaries join; contain valves to help in the lymph flow

4. Lymph Tissues and Organs

- **Lymph Nodes** – a bean-shaped organ that lies along the length of the lymph vessels
 - inside contains partitions called trabeculae, within these found are lymphatic tissue with macrophages and leukocytes
 - it destroys filtrates of lymph like bacteria, inhaled particles, and dead cells
- **Spleen** – function is similar to a lymph node, which filters lymph and destroys pathogens, except it does not have an outgoing flow.
 - also temporarily stores blood and lymphocytes, and an important site of fetal blood cell production
- **Thymus Gland** – helps immature lymphocytes (a type of white blood cell) to mature and become T lymphocyte
