Modern Geotechnical Design Codes of Practice Patrick Arnold, Gordon A. Fenton, Michael A. Hicks, Timo Schweckendiek, Brian Simpson, 2013 The ground is one of the most highly variable of engineering materials It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience Engineering practices relating to investigation and design methods site understanding and to safety levels acceptable to society will therefore vary between different regions The challenge in geotechnical engineering is to make use of worldwide geotechnical experience established over many years to aid in the development and harmonization of geotechnical design codes Given the significant uncertainties involved empiricism and engineering judgment will undoubtedly always be an essential element of geotechnical design However rigorous and scientific approaches based on probability theory are finding increased attention in the calibration of modern geotechnical codes of practice and these codes can and should be used to aid fundamental engineering

Bridge Evaluation, Repair and Rehabilitation A.S. Nowak, 2012-12-06 Evaluation repair and rehabilitation of bridges are

increasingly important topics in the effort to deal with the deteriorating infrastructure For example in the United States about 40 percent of the nation's 570 000 bridges are classified according to the Federal Highway Administration's FHWA criteria as deficient and in need of rehabilitation and replacement In other countries the situation is similar FHWA estimates the cost of a bridge replacement and rehabilitation program at 50 billion dollars The major factors that have contributed to the present situation are the age inadequate maintenance increasing load spectra and environmental contamination The deficient bridges are posted repaired or replaced The disposition of bridges involves clear economical and safety implications To avoid high costs of replacement or repair the evaluation must accurately reveal the present load carrying capacity of the structure and predict loads and any further changes in the capacity deterioration in the applicable time span Accuracy of bridge evaluation can be improved by using the recent developments in bridge diagnostics structural tests material tests structural analysis and probabilistic methods There is a need for an international exchange of advanced experience to increase the research efficiency The Workshop is organized on the premise that the exchange of existing American and European experience in the area of bridge evaluation repair and rehabilitation is beneficial for both parties involved
