This volume is the first effort to compile representative work in the emerging research area on the relationship of disability and physical environment since Barrier Free Environments edited by Michael Bednar was published in 1977 Since that time disability rights legislation like the Americans with Disabilities Act in the United States the worldwide growth of the independent living movement rapid deinstitutionalization and the maturation of functional assessment methodology have all had their impact on this research area The impact has been most noticeable in two ways fostering the integration of environmental variables in rehabilitation research and practice and changing paradigms for environmental interventions As the contributions in this volume demonstrate the relationship of disability and physical environment is no longer of interest primarily to designers and other professionals concerned with managing the resources of the built environment The physical environment has always been recognized as an important variable affecting rehabilitation outcome Until recently however concepts and tools were not available to measure its impact in clinical practice and outcomes research In particular lack of a theoretical foundation that integrated environment with the disablement process hampered development of both research and clinical methodology Thus the physical environment received little attention from the mainstream rehabilitation research community However this situation is changing rapidly Handbook of Energy Efficiency in Buildings Umberto Desideri,Francesco Asdrubali,2018-11-12 Handbook of Energy Efficiency in Buildings A Life Cycle Approach offers a comprehensive and in depth coverage of the subject with a further focus on the Life Cycle The editors renowned academics invited a diverse group of researchers to develop original chapters for the book and managed to well integrate all contributions in a consistent volume Sections cover the role of the building sector on energy consumption and greenhouse gas emissions international technical standards laws and regulations building energy efficiency and zero energy consumption buildings the life cycle assessment of buildings from construction to decommissioning and other timely topics The multidisciplinary approach to the subject makes it valuable for researchers and industry based Civil Construction and Architectural Engineers Researchers in related fields as built environment energy and sustainability at an urban scale will also benefit from the books integrated perspective Presents a complete and thorough coverage of energy efficiency in buildings Provides an integrated approach to all the different elements that impact energy efficiency Contains coverage of worldwide regulation Public Buildings Service International Conference on Firesafety in High-Rise Buildings ,1971

Underground Space Center, United States. Department of Energy, 1988 **Competitive Enforcement** Jeroen van der Heijden, 2008 Globally the private sector is becoming increasingly involved in regulation and regulatory enforcement often mutually competing or as a sector competing with traditional government departments This book offers insight into this trend in a specific policy area the built environment *From Bleeding Edge to Leading Edge* Doug Tarry Jr., 2024-02-05 I've done complicated It's complicated Residential and commercial buildings account for 17% of Canada's greenhouse gas emissions In the United States that figure is roughly 29% Net Zero homes which produce at least as much energy as they consume will play a key role in the current global climate crisis by drastically reducing energy consumption in the housing sector Doug Tarry is a leading international authority on Net Zero homes His company Doug Tarry Homes Limited has certified more Net Zero Net Zero Ready homes over 500 and counting than any other builder in Canada The title of Doug's book *From Bleeding Edge to Leading Edge A Builders Guide to Net Zero Homes* refers to his complicated and sometimes painful journey to Net Zero Throughout the book Doug offers his first hand experience on what has worked and what hasn't in building Net Zero homes along with expert advice from some of the industry's leading builders building scientists and energy consultants Much has been written about the technical details of building high performance homes the what This book goes further and deals with the why and the how discussing topics such as holistic design embodied carbon the Four Principles of Modern Design the 100 year home and climate resiliency Written in plain language and infused with humor and storytelling this book is a must read for builders renovators architects municipal officials industry stakeholders and home buyers anyone interested in the future of home building It will help builders and their teams get to Net Zero in less time with far less cost and pain **Snow Engineering: Recent Advances** I. Izumi, T. Nakamura, R.L. Sack, 1997-01-01 The objective of the conference was to provide a forum for engineers architects and scientists to discuss a broad range of research and design methods for various problems related to snow engineering Specialists in building and civil engineering environmental engineering energy engineering urban planning and regional development as well as snow scientists were brought together

for the conference The technical sessions were in five thematic areas as follows Snow technology and science Building and construction engineering Infrastructure and transportation Housing and residential planning Development strategy in snow countries The 115 papers provide keys to realize more comfortable living conditions in snow countries and to overcome many problems in heavy snow regions *Energy Research Abstracts* ,1988 **Modern Geotechnical Design Codes of Practice** Patrick Arnold,Gordon A. Fenton,Michael A. Hicks,Timo Schweckendiek,Brian Simpson,2013 The ground is one of the most highly variable of engineering materials It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience Engineering practices relating to investigation and design methods site understanding and to safety levels acceptable to society will therefore vary between different regions The challenge in geotechnical engineering is to make use of worldwide geotechnical experience established over many years to aid in the development and harmonization of geotechnical design codes Given the significant uncertainties involved empiricism and engineering judgment will undoubtedly always be an essential element of geotechnical design However rigorous and scientific approaches based on probability theory are finding increased attention in the calibration of modern geotechnical codes of practice and these codes can and should be used to aid fundamental engineering judgment Containing contributions on Code Implementation Code Application and Code Development this book provides a single resource that code developers practitioners and researchers can use to understand the different choices made by national code developers around the world Furthermore the book highlights some of the key challenges faced worldwide concerning the ongoing process of harmonizing geotechnical design code specifications [Access Register](#) Canada,1989
