

NOTE: Where the sheave blocks are an integral part of a crane or similar appliance they must comply with AS 1418. Which makes provision for higher rope speeds. Larger sheave diameters and constant duty operation.

A snatch block is a block with a gate or hinged portion through which the rope is passed to facilitate reeving.

Load rating of a sheave block is based on the rating of the head fitting of the respective sheave block and will be related to the number of parts of rope applied to the sheave block and the manner of reeving. The calculated load on the head fitting or sling should not exceed the S.W.L. of the block.

The following sketch shows the difference between a fixed and moving sheave. By attaching a sheave to the object to be raised or moved, there is a mechanical advantage of two.
