Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website **Geometric Design of Roads**

Urban Soils Rattan Lal, B. A. Stewart, 2017-10-18 Globally 30% of the world population lived in urban areas in 1950 54% in 2016 and 66% projected by 2050 The most urbanized regions include North America Latin America and Europe Urban encroachment depletes soil carbon and the aboveground biomass carbon pools enhancing the flux of carbon from soil and vegetation into the atmosphere Thus urbanization has exacerbated ecological and environmental problems Urban soils are composed of geological material that has been drastically disturbed by anthropogenic activities and compromised their role in the production of food aesthetics of residential areas and pollutant dynamics Properties of urban soils are normally not favorable to plant growth the soils are contaminated by heavy metals and are compacted and sealed Therefore the quality of urban soils must be restored to make use of this valuable resource for delivery of essential ecosystem services e g food water and air quality carbon sequestration temperature moderation biodiversity Part of the *Advances in Soil Sciences Series* *Urban Soils* explains properties of urban soils assesses the effects of urbanization on the cycling of carbon nitrogen and water and the impacts of management of urban soils soil restoration urban agriculture and food security evaluates ecosystem

 An expertly woven history and critique of the ideas shaping transportation in the United States Excruciating traffic jams
 Struggling transit agencies An epidemic of pedestrian fatalities It is clear that transportation is not working in the United
 States and that we need to rethink our approach In **Shifting Gears** Susan Handy provides an in depth history of the ideas
 embedded in American transportation policy and the emergence of new ways of thinking that could give us better
 transportation options Weaving in bits of her own personal narrative Handy gives readers a deeper and clearer
 understanding of our transportation system and the roots of its successes and failures Handy covers the myriad costs of car
 ownership the futility of expanding highways and the misplaced faith in technological innovation She offers new ideas and
 strategies that can improve the health of our car centric transportation system most crucially the idea that communities
 across the country must create an array of choices for daily travel **Shifting Gears** asserts that a diverse transportation
 ecosystem is essential for creating more just sustainable communities but getting there will take a dramatic shift in how we
