The Methodology of Plant Genetic Manipulation: Criteria for Decision Making Alan C. Cassells, Peter Jones, 2012-12-06 A range of novel techniques is available to the plant breeder today to complement classical breeding methods The new options are based on the integration of advances in plant cell biology with those in plant molecular biology Plant cell tissue and organ cultures provide efficient systems for transformation for the achievement of wide crosses and for the production of variation through spontaneous and induced mutation while permitting effective isolation of desired genotypes by in vitro selection This book presents a critical appraisal of the methodologies of plant genetic manipulation for advanced undergraduates postgraduates researchers and plant breeders and provides guidance on the choice of breeding options The latter depends on the breeding system of the crop the breeding objective and the tissue culture systems applicable to the target genotype s

Müller-Vahl,2018-03-13 Gilles de la Tourette Syndrome TS is a common albeit severely under diagnosed neuropsychiatric disorder that is caused by a complex genetic basis interacting with environmental factors High comorbidity rates with other neurodevelopmental disorders such as attention deficit hyperactivity disorder and obsessive compulsive disorder raise the intriguing hypothesis of a shared etiological background Abnormalities of corticostriatal thalamic cortical circuits CSTC and dysfunction of both dopamine and serotonin neurotransmitter systems are assumed to be associated with TS Recently multiple lines of evidence also point towards an important role of additional neurotransmitters such as histamine and glutamate For a very long time efforts to elucidate the etiology and pathophysiology of TS have been fragmented and hampered by low statistical power Finally after more than two decades of active research aiming to identify the etiology and pathophysiology of TS we are on the verge of a new era promising exciting and rapid discoveries in the field Investigators from around the world representing multiple disciplines and scientific approaches are joining their efforts in large scale initiatives supported both by European Union and US National funding agencies such as the European funded EMTICS TACTICS and TSGeneSEE consortia the Marie Curie Initial Training Network TS EUROTRAIN and the European Society for the Study of TS joining forces with the NIH funded TSAICG GGRI and Tic Genetics consortia Importantly all these initiatives are supported by TS patient support and advocacy groups Multiple resources are being consolidated and coming together to serve the study of TS including large well characterized patient cohorts and specialized epidemiological databases such as the unique resource of the Netherlands Twin Register This research topic showcases current large scale collaborative efforts aiming to elucidate the genetic and neurobiological background of TS through diverse approaches from genomewide association studies aiming to identify common variants associated to the disorder to neuroimaging studies and animal models Furthermore current approaches on the clinical assessment and management of the disorder are presented Propelled by the gradual availability of large scale TS cohorts novel methodologies and importantly sheer enthusiasm by multiple researchers working together across different countries the new era of the neurobiology of TS holds the promise to identify novel targets for improved therapies **Wheat Evolution and Domestication** Moshe Feldman,Avraham A. Levy,2023-10-03 This open access book covers a century of research on wheat genetics and evolution starting with the discovery in 1918 of the accurate number of chromosomes in wheat We re evaluate classical studies that are pillars of the current knowledge considering recent genomic data in the wheat group comprising 31 species from the genera Amblyopyrum Aegilops Triticum and other more distant relatives For these species we describe morphology ecogeographical distribution phylogeny as well as cytogenetic and genomic features For crops we also address evolution under human selection namely pre domestication cultivation and domestication We re examine the genetic and archeological evidence of where when and how domestication occurred We discuss unique aspects

of genome evolution and maintenance under polyploidization in natural and synthetic allopolyploids of the wheat group Finally we propose some thoughts on the future prospects of wheat improvement As such it can be of great interest to wheat researchers and breeders as well as to plant scientists and students interested in plant genetics evolution domestication and polyploidy
