The Classification of Quadrilaterals Zalman Usiskin, 2008-01-01 This monograph reports on an analysis of a small part of the mathematics curriculum the definitions given to quadrilaterals This kind of research which we call micro curricular analysis is often undertaken by those who create curriculum but it is not usually done systematically and it is rarely published Many terms in mathematics education can be found to have different definitions in mathematics books Among these are natural number parallel lines and congruent triangles trapezoid and isosceles trapezoid the formal definitions of the trigonometric functions and absolute value and implicit definitions of the arithmetic operations addition

subtraction multiplication and division Yet many teachers and students do not realize there is a choice of definitions for mathematical terms And even those who realize there is a choice may not know who decides which definition of any mathematical term is better and under what criteria Finally rarely are the mathematical implications of various choices discussed As a result many students misuse and otherwise do not understand the role of definition in mathematics We have chosen in this monograph to examine a bit of mathematics for its definitions the quadrilaterals We do so because there is some disagreement in the definitions and consequently in the ways in which quadrilaterals are classified and relate to each other The issues underlying these differences have engaged students teachers mathematics educators and mathematicians There have been several articles and a number of essays on the definitions and classification of quadrilaterals But primarily we chose this specific area of definition in mathematics because it demonstrates how broad mathematical issues revolving around definitions become reflected in curricular materials While we were undertaking this research we found that the area of quadrilaterals supplied grist for broader and richer discussions than we had first anticipated The intended audience includes curriculum developers researchers teachers teacher trainers and anyone interested in language and its use ,

Problem-Solving Strategies Arthur Engel,2008-01-19 A unique collection of competition problems from over twenty major national and international mathematical competitions for high school students Written for trainers and participants of contests of all levels up to the highest level this will appeal to high school teachers conducting a mathematics club who need a range of simple to complex problems and to those instructors wishing to pose a problem of the week thus bringing a creative atmosphere into the classrooms Equally this is a must have for individuals interested in solving difficult and challenging problems Each chapter starts with typical examples illustrating the central concepts and is followed by a number of carefully selected problems and their solutions Most of the solutions are complete but some merely point to the road leading to the final solution In addition to being a valuable resource of mathematical problems and solution strategies this is the most complete training book on the market *The Civil Engineer and Architect's Journal* ,1848 Encyclopaedia Britannica: Lord Chamberlain-Mecklenburg Hugh Chisholm,1911 This eleventh edition was developed during the encyclopaedia s transition from a British to an American publication Some of its articles were written by the best known scholars of the time and it is considered to be a landmark encyclopaedia for scholarship and literary style **Minutes of Proceedings of the Institution of Civil Engineers** Institution of Civil Engineers (Great Britain),1889 Vols 39 214 1874 75 1921 22 have a section 2 containing Other selected papers issued separately 1923 35 as the institution s Selected engineering papers **The Electrical World and Engineer** ,1900 **New York Teachers' Monographs** ,1918 **The Encyclopedia Britannica** ,1911 **The Encyclopædia Britannica** Hugh Chisholm,1911
