Secants And Tangents Instructional Fair:

Tangents and Secants of Algebraic Varieties F. L. Zak, 1993 The book is devoted to geometry of algebraic varieties in projective spaces Among the objects considered in some detail are tangent and secant varieties Gauss maps dual varieties hyperplane sections projections and varieties of small codimension Emphasis is made on the study of interplay between irregular behavior of higher secant varieties and irregular tangencies to the original variety Classification of varieties with unusual tangential properties yields interesting examples many of which arise as orbits of representations of algebraic groups

ABSTRACT

Fair Isn't Always Equal Rick Wormeli, 2023-10-10 Differentiated instruction is a nice idea but what happens when it comes to assessing and grading students How can you capture student progress growth and soft skill development and still provide an equitable grading environment An internationally recognized expert on grading practices author Rick Wormeli revisits these questions in this thoroughly updated second edition of Fair Isn't Always Equal Assessment and Grading in the Differentiated Classroom Wormeli reflects on current grading and assessment practices and how they can exist with high stakes accountable classrooms Important and sometimes controversial issues are tackled constructively in this book incorporating modern pedagogy and addressing the challenges of teaching diverse groups of students across all learning levels Middle and high school educators will easily recognize gray areas of grading and how important it is to have a shared school vision In this second edition new sections address sports eligibility honor roll descriptive feedback techniques and gifted talented students Previous chapters on test questions redos retakes grading scales and grading effort and behavior have been revised extensively This important book clearly explains the principles behind best grading practices so that you're ready for all grading questions or scenarios that you may encounter in your classrooms and schools

Teaching Mathematics in Grades 6 - 12 Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades 6 12 explores how research in mathematics education can inform teaching practice in grades 6 12 The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students mathematical thinking and then connecting this research to practices that enhance students understanding of the material The chapters in Part I introduce secondary teachers to the field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6 12 classrooms and how students thinking may develop in response to different teaching strategies

The Human Tutorial Dialogue Project Barbara A. Fox,2020-11-26 This volume s goal is to begin to document the dialogue processes in naturally occurring human tutoring in the context of informing the design of intelligent tutoring systems and of interactive systems in general This project represents the first empirical study of human tutorial dialogue from a conversation analytic perspective the conversational interaction is the focus of analysis rather than larger scale techniques for teaching It is also the first study of tutoring to make use of large quantities of carefully transcribed tutoring conversations dialogues The motivation for this focus comes from two sources First although all tutoring systems have implicit theory or theories of minute level interaction built into them little research has been done to form an empirical foundation for such theories Therefore current systems tend to be based on the designers intuitions rather than on data This fact almost certainly makes systems unnecessarily brittle in actual use Second of the small but growing collection of empirical studies of tutoring almost all have been designed and carried out by computer scientists whose training naturally leads them to be concerned with interaction at the level of knowledge transfer and teaching techniques Fox s training as a linguist brings attention to the minute by minute details of the interaction in particular to the processes that bring the interaction into existence and allow it to develop relatively smoothly **Teaching Mathematics in Colleges and**

Universities Solomon Friedberg,2001 Progress in mathematics frequently occurs first by studying particular examples and then by generalizing the patterns that have been observed into far reaching theorems Similarly in teaching mathematics one often employs examples to motivate a general principle or to illustrate its use This volume uses the same idea in the context of learning how to teach By analyzing particular teaching situations one can develop broadly applicable teaching skills useful for the professional mathematician These teaching situations are the Case Studies of the title Just as a good mathematician seeks both to understand the details of a particular problem and to put it in a broader context the examples presented here are chosen to offer a serious set of detailed teaching issues and to afford analysis from a broad perspective Each case raises a variety of pedagogical and communication issues that may be explored either individually or in a group facilitated by a faculty member Teaching notes for such a facilitator are included for each Case in the Faculty Edition The methodology of Case Studies is widely used in areas such as business and law The consideration of the mathematics cases presented here will help readers to develop teaching skills for their own classrooms **Teaching Mathematics in Colleges and**

Universities: Case Studies for Today's Classroom Solomon Friedberg,2001 Presents teaching situations for analysis so that mathematicians can develop teaching skills Examples are chosen to afford analysis from a broad perspective Each case

raises a variety of pedagogical and communication issues that may be explored either individually or in a group facilitated by a faculty member Issues include weak student knowledge of prerequisites cheating grading helping struggling students and teaching specific concepts Friedberg is director of the Boston College Mathematics Case Studies Project c Book News Inc
