

UK's Physical Features

Relief refers to the way the landscape changes in height. Upland areas are high above sea level. Lowland areas are not very high above sea level. They are often flat.

Upland areas are mainly found in:

- **Scotland** - The Northwest Highlands, the Cairngorm Mountains, the Grampian Mountains and the Southern Uplands. Ben Nevis is the UK's highest peak and is found in the Grampian Mountains.
- **England** - The Pennines, Lake District, Dartmoor and Exmoor. Scafell Pike is the highest mountain in England and is found in the Lake District.
- **Wales** - Snowdonia and the Brecon Beacons. Snowdon is the highest mountain in Wales and is found in Snowdonia.

Lowland areas can be found in the following places:

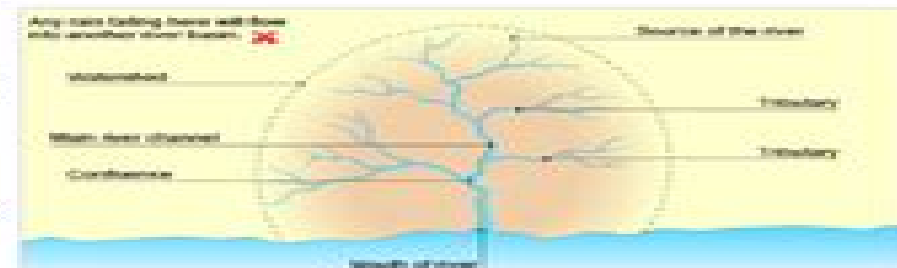

- around The Wash (East Anglia and Lincolnshire)
- Lincolnshire
- the Fens in East Anglia - the lowest place in the UK
- the Midlands
- the London Basin
- the Vale of York

Drainage Basin

A **drainage basin** is the area of land drained by a river and its tributaries.

- **Watershed** - the area of surrounding highland that separates different
- **Source** - where the river starts in the highland
- **Mouth** - where a river meets the sea
- **Confluence** - the point at which two rivers meet
- **Tributary** - a small river or stream that joins a larger river
- **Channel** - this is the main flow of the river

Drainage Basin

A **drainage basin** is an area of land that is drained by a river and all of its tributaries. The source is the furthest point of river from its mouth. The watershed marks the boundary between drainage basins. A **tributary** stream is a smaller stream that joins a larger stream or river. Where streams join, this is known as a **confluence**. As the river progresses downstream it begins to **meander**, (bend). The river channel is the groove within which the river flows, and the river will eventually flow down to the **mouth** where the river joins the sea.
