

Genetics and Probability Practice Problems

*One of the best ways to learn genetics is to work problems. Work through the problems presented below, methodically setting down the information you are given and what you are to determine. Write down the symbols used for the alleles and genotypes, and the phenotypes resulting from those genotypes. Avoid using Punnett squares; while useful for learning basic concepts, they are much too laborious and mistake-prone. Instead, break complex crosses into their monohybrid components and rely on the product rule to find the combined ratios. **Always** look at the answers you get to see if they make sense.*

1. Pattipan squash are either white or yellow. In growing pattipans, you notice that if you want to get white Pattipans at least one of the parents must be white. Which color is dominant? Explain.
2. Determine the probability of obtaining the indicated offspring in the following crosses:

Cross	Offspring	Probability
AAbb x AaBb	AaBb	a.
AaBB x AaBb	aaBB	b.
AABbcc x aabbCC	AabbCc	c.
AaBbCc x AaBbcc	aabbcc	d.

3. True-breeding tall red-flowered plants are crossed with dwarf white-flowered plants. The resulting F₁ generation consists of all tall pink-flowered plants. Assuming that height and flower color are each determined by a single gene locus, predict the results of an F₁ cross of the TtRr plants. List the phenotypes and predicted ratios for the F₂ generation.
4. Blood typing has often been used as evidence in paternity cases, when the blood type of the mother and child may indicate that a man alleged to be the father could not possibly have fathered the child. For the following mother and child combinations, **indicate** which blood groups of potential fathers would be exonerated (he can't be the father because he can't have the gene).

Blood Group of Mother	Blood Group of Child	Men Exonerated if he belongs to Blood Group(s)
AB	A	a.
O	B	b.
A	AB	c.
O	O	d.
B	A	e.

5. In rabbits, the homozygous CC is normal, Cc results in rabbits with deformed legs, and cc is **lethal**. For coat color, BB produces black, Bb brown, and bb a white coat. Give the phenotypic proportions of offspring from a cross of a deformed-leg, brown rabbit with a deformed-leg, white rabbit.
6. Polydactyly (extra fingers and toes) is due to a dominant gene. A father is polydactyl, the mother has the normal phenotype and they have had one normal child. What is the genotype of the father? Of the mother? What is the probability that a second child will have the normal number of digits?
7. In dogs, black (B) is dominant to chestnut (b), and solid color (S) is dominant to spotted (s). What are the genotypes of the parents that would produce a cross with 3/8 black solid, 3/8 black spotted, 1/8 chestnut solid and 1/8 chestnut spotted puppies? (Hint: determine the genotypes of the offspring first)

Jones, 2005 Biological Sciences Lawrence Wood, 2009-09-01 Numerous opinion polls reported from time to time in the daily newspaper reveal that approximately 40% of Americans believe in Creationism 40% in Intelligent Design and 20% in Evolution Have you ever wondered why there are three such drastically different explanations of our origin Evolution The Inevitable Consequence of the Need for Species Survival explains why there are three and how and why three were developed Perhaps you are a Creationist you will meet Stephen Geoffrey who was once a Creationist He describes his agonizing reappraisal of his beliefs and eventual abandonment of Creationism Take a look it might change your views The Bible states in Genesis Chapter 7 verse 19 regarding the biblical Flood that the waters prevailed so mightily upon the earth that all the high mountains under the whole heaven were covered That s a lot of water did it really happen Chapter 9 answers this question by examining the biblical Flood in detail such as the 820 million cubic miles of water required to cover the highest mountains for which there is no credible source If you do not believe in Evolution the powerful and detailed facts in Evolution might cause you to pause and reconsider even if only for a moment Genetics Daniel Hartl, Maryellen Ruvolo, 2012 This textbook gives an introduction to genetics and genomics at the college level It contains a chapter on human genetic evolution Other chapters treat transmission genetics molecular genetics and evolutionary genetics and provide an understanding of the basic process of gene transmission mutation expression and regulation **Genetics and Analysis of Quantitative Traits** Bruce Walsh, Peter M. Shifting Standards Allan Franklin, 2018-11-24 In *Shifting Standards* Allan Franklin provides an overview of notable experiments in particle physics Using papers published in *Physical Review* the journal of the American Physical Society as his basis Franklin details the experiments themselves their data collection the events witnessed and the interpretation of results From these papers he distills the dramatic changes to particle physics experimentation from 1894 through 2009 Franklin develops a framework for his analysis viewing each example according to exclusion and selection of data possible experimenter bias details of the experimental apparatus size of the data set apparatus and number of authors rates of data taking along with analysis and reduction distinction between ideal and actual experiments historical accounts of previous experiments and personal comments and style From Millikan s tabletop oil drop experiment to the Compact Muon Solenoid apparatus measuring approximately 4 000 cubic meters not including accelerators and employing over 2 000 authors Franklin s study follows the decade by decade evolution of scale and standards in particle physics experimentation As he shows where once there were only one or two collaborators now it literally takes a village Similar changes are seen in data collection in 1909 Millikan s

data set took 175 oil drops of which he used 23 to determine the value of e the charge of the electron in contrast the 1988 1992 E791 experiment using the Collider Detector at Fermilab investigating the hadroproduction of charm quarks recorded 20 billion events As we also see data collection took a quantum leap in the 1950s with the use of computers Events are now recorded at rates as of a few hundred per second and analysis rates have progressed similarly Employing his epistemology of experimentation Franklin deconstructs each example to view the arguments offered and the correctness of the results Overall he finds that despite the metamorphosis of the process the role of experimentation has remained remarkably consistent through the years to test theories and provide factual basis for scientific knowledge to encourage new theories and to reveal new phenomenon
