Pathfinding Boris Pritsker, 2021-01-04 Mathematical Labyrinths Pathfinding provides an overview of various non standard problems and the approaches to their solutions The essential idea is a framework laid upon the reader on how to solve nonconventional problems particularly in the realm of mathematics and logic It goes over the key steps in approaching a difficult problem contemplating a plan for its solution and discusses set of mental models to solve math problems The book is not a routine set of problems It is rather an entertaining and educational journey into the fascinating world of mathematical reasoning and logic It is about finding the best path to a solution depending on the information given asking and answering the right questions analyzing and comparing alternative approaches to problem solving searching for generalizations and inventing new problems It also considers as an important pedagogical tool playing mathematical and logical games deciphering mathematical sophisms and interpreting mathematical paradoxes It is suitable for mathematically talented and curious students in the age range 10 20 There are many Eureka type out of the ordinary fun problems that require bright idea and insight These intriguing and thought provoking brainteasers and logic puzzles should be enjoyable by the audience of almost any age group from 6 year old children to 80 year old and older adults **Electronic String Art** Stephen Erfle, 2024-02-20 String art is a well known and popular activity that uses string a board and nails to

produce artistic images although there are variations that use different modalities This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds The downside of this highly tactile activity is that it is quite time consuming and rigid By contrast electronic string art offers much more flexibility to set up or change nail locations and counting rules and the images created from those changes change instantaneously Electronic String Art Rhythmic Mathematics invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise accessible explanations of the underlying mathematical principles regarding how the images were created and how they change Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry number theory and modular arithmetic from approximately 200 short interdependent sections Features Readers are able to drill down on images in order to understand why they work using short 1 to 2 page stand alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open ended inherently flexible teaching resource for elementary middle and high school level mathematics The most mathematically challenging sections or portions of a section are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises solutions and many online digital resources These QR codes take you to these digital resources One takes you directly to the web version of the string art model used as a starting point for teaching the parameters of the model in Section 25.5 The other takes you to the ESA web page with additional links to a variety of resources
