Bureau of Naval Personnel, 1959 Naval Firepower Norman Friedman, 2013-08-20 For more than half a century the big gun was the arbiter of naval power but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same Because the naval gun platform was itself in motion finding a firing solution was a significant problem made all the more difficult when gun sizes increased and fighting ranges lengthened and seemingly minor issues like wind velocity had to be factored in To speed up the process and eliminate human error navies sought a reliable mechanical calculation This heavily illustrated book outlines for the first time in layman s terms the complex subject of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era Covering the directors range finders and electro mechanical computers invented to solve the problems America s leading naval analyst explains not only how the technology shaped and was shaped by the tactics involved but analyses their effectiveness in battle His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws conclusions that will surprise many readers He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the US Navy actions in the Solomons and at Surigao Strait All major navies are covered and the story concludes at the end of World War II with the impact of radar This is a book that everyone with a more than passing interest in twentieth century warships will want to read and nobody professionally involved with naval history can afford to miss **Fairplay** , 2005-07 **Yearbook of Enlisted Training** United States. Town class cruisers this book takes the same approach combining coverage of the development design details and career highlights of the original class as well as the Uganda Minotaur and Tiger designs that were derived from them Often called the Colony class they were an attempt to incorporate the characteristics of the preceding Town class within the reduced 8 000 ton limit agreed under the 1936 London Treaty In general layout they resembled the earlier class but adopted upright rather than raked funnels and masts The use of a flat transom stern conferred both hydrodynamic and internal space advantages Not surprisingly they turned out to be very cramped ships which struggled to accommodate all the wartime additions of extra electronics and light AA guns as well as the increased crew needed to man them Many of the later modifications to existing ships and alterations to the succeeding designs were attempts to alleviate these issues most visibly the reduction of the main armament from four to three turrets Nevertheless they were available in significant numbers and gave sterling service across all theaters of the naval war In this major study Conrad Waters makes extensive use of archive material to provide a technical evaluation of the Fiji class design and its subsequent performance He outlines the class s origins in the context of inter war cruiser policy explains the design and construction process and describes the characteristics of the resulting ships and how these were adapted in the light of wartime developments An overview of service focuses on major engagements assessing the extent to which the class met its designers expectations and detailing the consequences of action damage Later chapters continue the story into the Cold War era examining the various post war modernization programs and concluding with the radical redesign of the Tiger class that produced the Royal Navy s last conventional cruisers Heavily illustrated with contemporary photographs original plans and drawings by Dave Baker John Jordan and George Richardson *British Fiji Class Cruisers* provides a definitive reference to one of the Royal Navy s most important Second World War warship designs **Bulletin of the Atomic Scientists** ,1986-06
